Applied Physic-l" is a compulsory paper for the first year Diploma course in Engineering & Technology. Syllabus of this books is strictly aligned as per model curriculum of AICTE, and academic content is amalgamated with the concepts of outcome-based education. Book covers six topics- Physical World, Units and Measurements; Force and Motion; Work, Power and Energy; Rotational Motion; Properties of Matter; Heat and Thermometry. Each topic is written in easy and lucid manner. Every chapter contains a set of exercise at the end of each unit to test the student's comprehension. Some salient features of the book · Content of the book is aligned with the mapping of Course Outcome, Programs Outcomes and Unit Outcomes. · Book provides lots of interested facts, QR Code for E-resources, QR Code for use of ICT etc. · Students and teacher centric subject materials are included in book with balanced and chronological manner. · Figures and tables are inserted to improve clarity of the topics. · Short questions, objective questions and long answer exercises of different difficulty levels are given for practice after every chapter. · Solved numerical examples are provided with systematic steps in each chapter followed by numerical exercises with hints.

Mechanics and Chemistry in Lubrication - A. Dorinson 1985-08-01

Although it is widely recognized that friction, wear and lubrication are linked together in a single interdisciplinary complex of scientific learning and technological practice, fragmented and specialized approaches still predominate. In this book, the authors examine lubrication from an interdisciplinary viewpoint. They demonstrate that once the treatment of lubrication is released from the confines of the fluid film concept, this interdisciplinary approach comes into full play. Tribological behavior in relation to lubrication is then examined from two major points of view: one is mechanical, not only with respect to the properties and behavior of the lubricant but also of the surfaces being lubricated. The other is chemical and encompasses the chemistry of the lubricant, the surfaces and the ambient surroundings. It is in the emphasis on the interaction of the basic mechanical and chemical processes in lubrication that this book differs from conventional treatments.
