**The Cambridge Handbook of U.S. Labor Law for the Twenty-First Century** - Richard Bales 2019-12-05

Over the last fifty years in the United States, unions have been in deep decline, while income and wealth inequality have grown. In this timely work, editors Richard Bales and Charlotte Garden - with a roster of thirty-five leading labor scholars - analyze these trends and show how they are linked. Designed to appeal to those being introduced to the field as well as experts seeking new insights, this book demonstrates how federal labor law is failing today's workers and disempowering unions; how union jobs pay better than nonunion jobs and help to increase the wages of even nonunion workers; and how, when union jobs vanish, the wage premium also vanishes. At the same

time, the book offers a range of solutions, from the radical, such as a complete overhaul of federal labor law, to the incremental, including reforms that could be undertaken by federal agencies on their own.

Space Insurance: International Legal Aspects - Katarzyna Malinowska  
2017-03-15

Insurance related to outer space activities has been around since the 1960s, but has become vastly more significant with the increased commercial use of satellites. This book focuses on the legal aspects of space insurance in the contractual context, analysing space risk as well as the insurance terms used on the market. It offers the first in-depth coverage, both practical and theoretical, of space insurance from an international law perspective. Attending throughout to the important and problematic distinction between the space segment (upstream) and ground segment (downstream) in space law, this book deals comprehensively with such issues and topics as the following: - the main hazards relating to space activities; - the impact of new space technologies on the level of risk and insurance; - the differing types of risks attributable to various entities in the context of insurable interest; - aspects of the space risk allocation regimes and risk assessment; - the impact of the five 'space treaties' – the Outer Space Treaty, the Liability Convention, the Rescue Agreement, the Registration Convention and the Moon Agreement – on the subject and scope of insurance coverage; - the advent of suborbital flight, commercial human space flight and space tourism

in the context of emerging insurance risks; - the problem of space debris; - contractual aspects of space activities affecting the space insurance risks; - basic notions such as 'outer space', 'space object' in the context of space activities and related insurance coverage; - basic insurance principles and their operation in the space insurance; and - the adjustment of losses and the settlement of disputes in space insurance. The author emphasises the need to understand the various insurance risks facing particular types of commercial space activities, including pre-launch, launch, transportation, spaceflight, satellite communications, satellite navigation, satellite remote sensing and space station operation.

Satellites are increasingly a vital part of many daily activities of contemporary society and the Earth's orbit is becoming ever more crowded, heightening the risks of collision, damage and claims. This thoroughly researched book will therefore be extremely useful to lawyers, policymakers and academics tasked with defining the scope of insurance coverage that accurately mirrors technological, contractual and legal reality. Its practical aspect will be of extraordinary value to insurance lawyers, underwriters and brokers.
