Art of the Hot Rod - Ken Gross 2012-06-19

The best hot rods are art on four wheels, and this book, a collection of studio photography of the cars produced by the world's top hot-rod builders, is nothing less than a gallery of the best of American hot rodding. Profiling top builders like Pete Chapouris, Roy Brizio, Vern Tardel, Troy Trepanier, and 15 others and featuring studio portraits of their most outstanding custom creations, this book celebrates the uniquely American marriage of mechanical know-how to an inspired sense of style and design. Built from the ground up, pieced together from salvaged parts, rebuilt with classic looks and futuristic technology—these are automotive works of art, as powerful on the page as they are on the street. Through the stunning portraiture of master photographer Peter Harholdt, *Art of the Hot Rod* captures these magnificent creations as never seen before.

How to Build Altered Wheelbase Cars - Steve Magnante 2010

In *How to Build Altered Wheelbase Cars*, renowned writer Steve Magnante first walks readers through the colorful history of the altered wheelbase period and then shows them how to perform these radical modifications themselves. Magnante's fun and colorful style makes for entertaining reading, and the coverage of floorpan mods, chassis alterations, and both front and rear suspension upgrades are covered in great detail on three different chassis types. After reading this book, the basic technical tenets of altering vehicle wheelbase will be understood and the almost mythical legend surrounding such cars will be fully realized. What were once considered "race only" modifications can now be civilized for street use, and Magnante carefully reviews all of the relevant points for optimal appearance, performance, and safety.

Million-Dollar Muscle Cars - Colin Comer 2007-01

About the book: In the 1960s and 1970s American automakers produced millions of muscle cars: high-performance cars more adept at competition than transportation. The baby boom generation snapped up these cars and proceeded to use them as intended, drag and street racing the cars until there was nothing left of them. No longer minimum-wage high schoolers, today's boomers enjoy more disposable income than any generation in history. And many of them are spending that income on highly collectible muscle cars. Because so few muscle cars survived the abuse of young drivers back in the day, muscle car prices have skyrocketed, with mundane muscle cars commanding six-figure prices and the most significant muscle cars surpassing the million-dollar mark. Respected muscle car expert Colin Comer and top photographer David Newhardt tell the story of each of these rarest of rare cars in *Million-Dollar Muscle Cars*, the only book dedicated to these top-flight cars. U.S. Navy Medical Department Officer Career Guide - 1991

Achtung-Panzer! - Heinz Guderian 1995

This is one of the most significant military books of the twentieth century. By an outstanding soldier of independent mind, it pushed forward the evolution of land warfare and was directly responsible for German armoured supremacy in the early years of the Second World War. Published in 1937, the result of 15 years of careful study since his days on the German General Staff in the First World War, Guderian's book argued, quite clearly, how vital the proper use of tanks and supporting armoured vehicles would be in the conduct of a future war. When that war came, just two years later, he proved it, leading his Panzers with distinction in the Polish, French and Russian campaigns. Panzer warfare had come of age, exactly as he had forecast. This first English translation of Heinz Guderian's classic book - used as a textbook by Panzer officers in the war - has an introduction and extensive background notes by the modern English historian Paul Harris.

Cement Chemistry - H. F. W. Taylor 1997

H F W Taylor was for many years Professor of Inorganic Chemistry at the University of Aberdeen, Scotland. Since 1948, his main research interest has been the chemistry of cement. His early work laid the foundations of our understanding of the structure at the nanometre level of C-S-H, the principal product formed when cement is mixed with water, and the one mainly responsible for its hardening. Subsequent studies took him into

many additional aspects of the chemistry and materials science of cement and concrete. His work has been recognized by Fellowships and by other honours and awards from many scientific societies in the UK, USA and elsewhere. This second edition of Cement chemistry addresses the chemistry and materials science of the principal silicate and aluminate cements used in building and Civil engineering. Emphasis throughout is on the underlying science. The book deals more specifically with the chemistry of Portland cement manufacture and the nature of the resulting product, the processes that occur when this product is mixed with water, the nature of the hardened material, the chemistry of other types of hydraulic cement, and chemical and microstructural aspects of concrete, including processes that affect its durability. Since the first edition of this book was published in 1990, research throughout the world has greatly augmented our knowledge in all of these areas. The present edition has been updated and revised to take account of these advances. The reader will acquire a solid understanding of the subject and will be better equipped to deal with the problems and pitfalls that can arise in engineering practice as a result of inadequate understanding of the relevant chemistry. It will serve both as an introduction to those entering the subject for the first time and as a guide to the latest developments for those already experienced in the field.

The Allure of the Automobile - Ken Gross 2010

The Allure of the Automobile presents eighteen of the world's rarest and most brilliantly conceived cars from 1930 to the mid-1960s, including masterpieces from Bugatti, Dusenbergh, Delage, Porsche, Mercedes-Benz, Jaguar, and Ferrari. Created for the privileged few (and in some cases previously owned by Clark Gable and Steve McQueen), these luxurious, custom built automobiles embodied speed, style, and elegance; they influenced and were influenced by contemporary art, architecture, fashion, and design. Many of the featured automobiles are one of a kind or were built largely by hand and in small numbers. The racing motorcar is a potent symbol of twentieth century modernity, embodying speed, style, elegance, and good design. Whether a practical tool or part of a celluloid fantasy, the automobile remains a powerful symbol embedded in our collective cultural consciousness. This book contains an illustrated text with period photographs of the cars, exploring the evolution of the automobile from the opulent and luxurious French custom coachwork models of the early 1930s to post-World War II triumphs of German engineering to the supremacy of Italian sport-car design in the second half of the century.
