The World System - Barry Gills 2014-04-04

The historic long term economic interconnections of the world are now universally accepted. The idea of the economic 'world system' advanced by Immanuel Wallerstein has set the period of linkage in the early modern period but Andre Gunder Frank and Barry K. Gills think that this date is much too late. They argue an interconnection going back as much as 5000 years. In *The World System*, leading academics examine this issue, in a debate contributed to by William H. McNeill and Immanuel Wallerstein among others.

The Five Thousand Year Leap - W. Cleon Skousen 1981

The Founding Fathers of the United States of America created the first free people in modern times. They wrote a new kind of Constitution which is now the oldest in existence. They built a new kind of commonwealth designed as a model for the whole human race. They believed it was thoroughly possible to create a new kind of civilization; giving freedom, equality, and justice to all. The Founders created a new cultural climate that gave wings to the human spirit. They built a free-enterprise culture to encourage industry and prosperity. They gave humanity the needed ingredients for a gigantic 5,000-year leap in which more progress has been made in the past 200 years than all of prior recorded human history. All of this came about because of 28 basic principles the Founders discovered, upon which all free nations must be built in order to succeed. This eBook includes the original index, footnotes, table of contents and page numbering from the printed format, and also new illustrations.

Approaching Chaos - Lucy Wyatt 2010

Twenty-first century civilization faces economic, ecological and spiritual meltdown. To survive this century as civilized people, we need to refer back to a time when city life was in harmony with nature and the wider environment. We cannot dismiss the ancients as 'primitive' when they had a blueprint for civilization that first appeared over 5,000 years ago. Perhaps we should look at the ancient past for solutions.

We've Never Been Alone - Paul Von Ward 2011-09-01

Whether you call them gods, angels, ETs, or aliens, sufficient proof now exists that beings more advanced than humans have influenced our history. Evidence suggests that these outsiders shaped our religions, genes, technology, and cultures. In fact, they may have provided the impetus for modern civilization. Paul Von Ward investigates why modern science and religion refuse to address the possibility that humans interact with Advanced Beings (ABs). He reviews sacred texts, myths and legends--from the Old Testament, Hebrew texts, and the Vedas, to the Greek myths, Sumerian tablets, and other historical sources to make the link between religions, their gods, and alien intervention. He shows how this history of AB intervention has been suppressed and challenges readers to reexamine the origins of notions like "divine revelation" to find common ground among the world's cultures and religions. Previously published as *God, Genes, and Consciousness*.

A Year of Vengeance - Edward Stratford 2017-09-25

Despite significant advances in annual chronology, the Old Assyrian trade fundamentally lacked a regime of time at the level of the merchant's commercial and personal activities. In this book, Stratford sets out to recapture time through narrative, drawing on the relationship between the two described by the philosopher Paul Ricouer. Investigating a possible case of revenge leads to weaving together more than a hundred mostly undated documents to form a narrative within the course of a single year of vengeance, including trade disruptions, illnesses, and commerce. This process demonstrates relationships between document and material context, and time and narrative. Along the way, Old Assyrian commercial time and its tempos become more clear, leading to descriptions of the scale of the trade and the nature of Old Assyrian archives as they have survived. Ultimately, the Assyrians involved appear as the earliest historical individuals in world history. The treatment of Šalim-aḫum's apparent revenge comprises a practicum in historical interpretation in the ancient world of interest to practitioners and theoreticians of both the ancient world and world history.

Historians Debate the Rise of the West - Jonathan Daly 2014-07-11

How and why did Europe rise to world pre-eminence? Providing an overview of this central historical conundrum of modern times, *Historians Debate the Rise of the West* enables students to grasp major scholars' evaluations of the biggest picture of all: how Western civilization fits into modern world history. Most historians who write in this area subscribe to a combination of interpretations set forward by scholars of the field, like David Landes, Jared Diamond or Kenneth Pomeranz. But it is often difficult to understand the position they are coming from, and for readers to understand clearly how Europe made the transition from merely one of many developing civilizations to the world's first industrial power. In this volume, Jonathan Daly introduces us to the main interpretations of Europe's rise that have been proposed over the past half-century and presents the views of these historians and schools of scholarship, advocating for each point of view and letting each author speak for him or herself through the inclusion of brief textual selections. Also included are interesting biographical details for each scholar, as well as a list of further reading for each chapter and a collection of maps. An ideal introduction for students of world history.

The Origins of Capitalism and the "Rise of the West" - Eric Mielants 2008-08-13

In this study, Eric Mielants provides a novel interdisciplinary interpretation of the origins of modernity and capitalism in particular. He argues that contrary to popular thinking, the Rise of the West should not be analyzed in terms of the Industrial Revolution or the colonization of the New World, but viewed from long-term developments that occurred in the Middle Ages. A fascinating overview of different civilizations in East Asia, South Asia, and Northwestern Africa is provided and systematically compared and contrasted with Western Europe. This book addresses some of the major debates that have recently unfolded in world history, comparative sociology, political economy, sociological theory and historical sociology. Mielants indicates how many existing theories (such as Marxism, World-Systems Theory and Smithian Modernization Theory) have suffered from either Eurocentric or limited temporal and spatial analyses, which prevents them from a complete understanding of why the origins of capitalism and citizenship emerged in Western Europe.

Theology from the Womb of Asia - C.S. Song 2005-07-07

With 'Theology from the Womb of Asia', Song continues to demonstrate that he is one of the most creative and important theologians of our time. He forces us to expand the horizons of our theological vision, not only by drawing on the resources of Asian thought and experience, but also by insisting that we do theology with passion. Here he offers images, fables, poems, parables, and visions, woven together with his own

compelling prose. The biblical stories with which we thought we were familiar become new and more compelling stories when we revisit them with this able and wise guide. And our whole approach to life and living is transformed by the freshness he breathes into all that he surveys with us. --Robert McAfee Brown, Professor Emeritus of Theology and Ethics, Pacific School of Religion In 'Theology from the Womb of Asia', C. S. Song shows how the story of God's compassion in Jesus and the many heartrending stories and poems of the Asian people are reaching out towards each other. Doing theology in this perspective is not a matter of application of doctrine, but of recognition of a relation between the suffering God and suffering humanity, which transcends many artificial and alienating distinctions. The book is an appeal to Asian theologians, but at the same time a necessary challenge to a Western academic theology and missionary thinking. --Bert Hoedemaker, Professor of Missions and Christian Ethics, University of Groningen, the Netherlands A splendid example of doing theology with Asian resources. A breath of fresh air to liven up traditional theology, using original reflections and observations with the backing of close knowledge of traditional theology. A book no theological college can do without. --Yeow Choo Lak, The South East Asia Graduate School of Theology, Singapore C. S. Song is Professor of Theology and Asian Cultures at Pacific School of Religion. His recent publications include 'The Believing Heart'.

How Big is Big and How Small is Small - Timothy Paul Smith 2013-10-24

This book is about how big is the universe and how small are quarks, and what are the sizes of dozens of things between these two extremes. It describes the sizes of atoms and planets, quarks and galaxies, cells and sequoias. It is a romp through forty-five orders of magnitude from the smallest sub-nuclear particles we have measured, to the edge of the observed universe. It also looks at time, from the epic age of the cosmos to the fleeting lifetimes of ethereal particles. It is a narrative that trips its way from stellar magnitudes to the clocks on GPS satellites, from the nearly logarithmic scales of a piano keyboard through a system of numbers invented by Archimedes and on to the measurement of the size of an atom. Why do some things happen at certain scales? Why are cells a hundred thousandths of a meter across? Why are stars never smaller than about 100 million meters in diameter? Why are trees limited to about 120 meters in height? Why are planets spherical, but asteroids not? Often the size of an object is determined by something simple but quite unexpected. The size of a cell and a star depend in part on the ratio of surface area to volume. The divide between the size of a spherical planet and an irregular asteroid is the balance point between the gravitational forces and the chemical forces in nature. Most importantly, with a very few basic principles, it all makes sense. The world really is a most reasonable place.

North America before the European Invasions - Alice Beck Kehoe 2016-12-01

North America Before the European Invasions tells the histories of North American peoples from first migrations in the Late Glacial Age, sixteen thousand years ago or more, to the European invasions following Columbus's arrival. Contrary to invaders' propaganda, North America was no wilderness, and its peoples had developed a variety of sophisticated resource uses, including intensive agriculture and cities in Mexico and the Midwest. Written in an easy-flowing style, the book is a true history although based primarily on archeological material. It reflects current emphasis within archaeology on rejecting the notion of "pre"-history, instead combining archaeology with post-Columbian ethnographies and histories to present the long histories of North America's native peoples, most of them still here and still part of the continent's history.

Discovery and Invention - Charles T. Stewart Jr. 2019-06-12

The history of humanity can be written in terms of discovery and invention. They are very different cognitive processes—search for order and problem solving. This book is a search for explanation of the Scientific and Industrial Revolutions. It surveys seven civilizations in terms of both their achievements and their failures. What were the characteristics they shared that promoted progress? What prevented or discouraged progress in discovery and or in invention? Sumer was creative, the mother of civilizations. Egypt was not. In Sumer, authority was divided, and it was a trading economy. Egypt was authoritarian and closed. Rome and Islam inherited the Greek legacy. Rome was not interested; it had a different agenda. Islam progressed, but civilization conflicted with religion and then regressed. China led in inventions but

then stagnated and always lagged in discovery. Its ultimate failure has multiple explanations that include the scope of authority, structure of society and economy, and of language and script. But so was its preference for intuition over logic or evidence as the method of seeking the truth. It is Greek capacity for abstraction origin a mystery that was essential for its achievements: discoveries of the structure of the universe and the cognitive approach to truth seeking. Much invention was a byproduct of discovery. It is Greek achievements in discovery and abstract reasoning that Europe adopted and advanced, leading to the scientific and subsequent industrial revolutions. Ours is a new phase in human history. What were some of its consequences, and what are its prospects?

5000 Designs and Motifs from India - Ajit Mookerjee 1996-06-07

Over the last five thousand years, Indian artists have developed a wide range of unique and decorative artistic styles. This rich collection of copyright-free designs and motifs draws on that heritage to provide today's artists and designers with a stimulating and practical archive of usable material. In this volume are designs adapted from seals, dolls, and toys of the Harappa culture; punch-marked coins and pottery from South India; Ajanta and Bagh murals; Muslim monuments; Buddhist temples; textiles from Gujarat, Punjab, Himachal Pradesh, and other regions; and much more. Embodying the variety and complexity of traditional Indian design, the motifs in this collection will be of immediate use to artists and illustrators as well as providing an exciting glimpse into the rich store of Indian decorative art.

Plague Ship - Frank G. Slaughter

From the Author of Code Five, Doctor's Wives, and Doctor's Daughters High in the Andes Mountains of Peru, an archaeologist stumbles upon an ancient tomb, unwittingly releasing the germs from a civilization doomed by a plague over 5,000 years ago. What happens when this deadly organism, for which there is no antidote, reappears, forms the basis of this sensational novel by the author of Code Five. This is the story of one man in particular—Dr. Grant Reed and the dedicated crew of the international hospital ship Mercy, as they set about the task of quarantining the first victims of a hideous plague. Set adrift by frightened Peruvians, the aging and crippled ship faces a hurricane, mutinous patients, and even a pair of great white sharks, grisly mascots of a ship of death. . . . Frank Slaughter here takes on one of the most important and exciting subjects to be found among his novels—the complex, high-stakes world of interglobal medicine, taking us behind the public deeds to the private people whose courage can make the difference between today's flus . . . and tomorrow's headlines. This is one of Frank Slaughter's finest medical suspense stories, a superbly thrilling tale based on some all-too- real possibilities.

World Textiles - Mary Schoeser 2022-09-29

The history of textiles, more than that of any other artefact, is a history of human ingenuity. From the very earliest needles of 50,000 years ago to the smart textiles of today, textiles have been fundamental to human existence, and enjoyed, prized and valued by every culture. Silks from China, cottons from India, tapestries from Flanders, dyes from South America the appeal of different weaves, colours and patterns was long a motivation for trade, the exchange of ideas and sometimes even war. Mary Schoesers groundbreaking book, now revised and updated to incorporate new research, presents a chronological survey of textiles around the world from prehistory to the present. It explores how they are made, what they are made from, how they function in society and the ways in which they are valued and given meaning as well as reflecting on the environmental challenges they present today. World Textiles offers an invaluable introduction to this vast and fascinating subject for makers, designers, textile and fashion professionals, collectors and students alike.

Fabric - Victoria Finlay 2022-06-07

A magnificent work of original research that unravels history through textiles and cloth—how we make it, use it, and what it means to us. How is a handmade fabric helping save an ancient forest? Why is a famous fabric pattern from India best known by the name of a Scottish town? How is a Chinese dragon robe a diagram of the whole universe? What is the difference between how the Greek Fates and the Viking Norns used threads to tell our destiny? In *Fabric*, bestselling author Victoria Finlay spins us round the globe, weaving stories of our relationship with cloth and asking how and why people through the ages have made it, worn it, invented it, and made symbols out of it. And sometimes why they have fought for it. She beats the inner bark of trees into cloth in Papua New Guinea, fails to handspin cotton in Guatemala, visits tweed weavers at their homes in Harris, and has lessons in patchwork-making in Gee's Bend, Alabama - where in the 1930s, deprived of almost everything they owned, a community of women turned quilting into an art form. She began her research just after the deaths of both her parents —and entwined in the threads she found her personal story too. *Fabric* is not just a material history of our world, but Finlay's own journey through grief and recovery.

Frank Maria - Paul D. Garrett 2007

The Frank Maria papers, all 100 linear feet of it which I first saw with amazement at his Pumpkin Hill residence in 2002, is literally a treasure trove of historical information on the Arab American experience of the mid-late 20th Century. It reflects the energetic life of someone who was passionately devoted to increasing understanding about the Arab world and promoting peace and stability in that part of the world and beyond. As one of the nation's leading spokespersons from an Arab American perspective and as an activist in numerous organizations, Maria's papers contain some of the richest documentation available anywhere for studying the dynamic evolution of the Arab American community. It is a privilege, on behalf of the Immigration History Research Center, to serve as stewards of this exceptional resource material. Joel Wurl, Curator and Assistant Director, Immigration Research History Center, University of Minnesota If you want to understand the history of American foreign policy related to the creation and maintenance of Israel in defiance of the rights of the indigenous Palestinians, read this book. Seen through the life and work of Dr. Fank Maria whose tireless efforts for justice in the Middle East are legion, the book provides untold details of U.S. involvement with Israel found in no other account. Always a meticulous preserver of documents, letters, meeting notes, etc., the life of Frank Maria chronicles one of the most important developments in World history. The Oxford History of Historical Writing - Axel Schneider 2011-05-05

The fifth volume of The Oxford History of Historical Writing offers essays by leading scholars on the writing of history globally since 1945. Divided into two parts, part one selects and surveys theoretical and interdisciplinary approaches to history, and part two examines select national and regional historiographies throughout the world. It aims at once to provide an authoritative survey of the field and to provoke cross-cultural comparisons. This is chronologically the last of five volumes in a series that explores representations of the past across the globe from the beginning of writing to the present day.

European Societies in the Bronze Age - A. F. Harding 2000-05-18

The Bronze Age, roughly 2500 to 750 BC, was the last fully prehistoric period in Europe and a crucial element in the formation of the Europe that emerged into history in the later first millennium BC. This book focuses on the material culture remains of the period, and through them provides an interpretation of the main trends in human development that occurred during this timespan. It pays particular attention to the discoveries and theoretical advances of the last twenty years that have necessitated a major revision of

received opinions about many aspects of the Bronze Age. Arranged thematically, it reviews the evidence for a range of topics in cross-cultural fashion, defining which major characteristics of the period were universal and which culture and area-specific. The result is a comprehensive study that will be of value to specialists and students, while remaining accessible to the non-specialist.
