Accounting Information Systems - Vernon J. Richardson
2020

"Whether accountants work in public accounting or in industry, they use a variety of technology tools. The International Federation of Accountants (IFAC) describes four roles for accountants with respect to information technology: (1) users of technology and information systems, (2) managers of users of technology and related information systems, (3) designers of information systems, and (4) evaluators of information systems. As users, managers, designers, and evaluators of technology and technology-driven business processes, accountants must understand the organization and how organizational processes generate information important to management. To ensure that processes and systems are documented-and to participate in improvements to processes and systems-accountants must be business analysts. This text aims to provide students with a variety of technology and business analysis concepts and skills. It is intended for use in the first Accounting Information Systems course at both the undergraduate and graduate levels. Ongoing changes in business technology-such as the move to Internet-based systems, Big Data and Data Analytics, software as a service, and mobile access to enterprise information, as well as increased security and control requirements-make technological skills more important than ever for accounting graduates. This text also aims to show how current changes in accounting and technology affect each of these roles. For example, the Sarbanes-Oxley Act affects financial reporting system controls, and XBRL changes system requirements and affects how companies develop and report financial information. We also consider the role of Big Data and Data Analytics and how they are used in financial accounting, managerial accounting, and auditing. Additionally, we consider both the COBIT and COSO frameworks to describe how organizations deal with risk management. In their roles as managers, designers, and evaluators, accountants must know how those frameworks affect their accounting and related information systems"--

Fundamentals of Business Process Management - Marlon Dumas
2018-03-23

This textbook covers the entire Business Process Management (BPM) lifecycle, from process identification to process monitoring, covering along the way process modelling, analysis, redesign and automation. Concepts, methods and tools from business management, computer science and industrial engineering are blended into one comprehensive and inter-disciplinary approach. The presentation is illustrated using the BPMN industry standard defined by the Object Management Group and widely endorsed by practitioners and vendors worldwide. In addition to explaining the relevant conceptual background, the book provides dozens of examples, more than 230 exercises – many with solutions – and numerous suggestions for further reading. This second edition includes extended and completely revised chapters on process identification, process discovery, qualitative process analysis, process redesign, process automation and process monitoring. A new chapter on BPM as an enterprise capability has been added, which expands the scope of the book to encompass topics such as the strategic alignment and governance of BPM initiatives. The textbook is the result of many years of combined teaching experience of the authors, both at the undergraduate and graduate levels as well as in the context of professional training. Students and professionals from both business management and computer science will benefit from the step-by-step style of the textbook and its focus on fundamental concepts and proven methods. Lecturers will appreciate the class-tested format and the additional teaching material available on the accompanying website.

Fundamentals of Accounting Information Systems - Grace F. Johnson 2013-11

Fundamentals of Accounting Information Systems: An Internal Control Approach introduces students to the foundations of accounting information systems: how data flows through various accounting subsystems and the manner in which it is processed and converted into output for users. Written in an informal and conversational style, this textbook emphasizes the role of internal controls in accounting information systems alongside discussions of business process data flows. Examples and illustrations deal with entities of various sizes and in different industries, including not-for-profit and government organizations. The connection between basic business processes and accounting information systems is explored in computerized and semi-computerized environments. The textbook begins with overviews of internal control concepts, flowcharting, and business processes. Later chapters focus on specific business processes and the way data moves in and between them. These business process chapters include a capstone assignment, created so students will draw on the core questions in each chapter and apply them in a new situation.

Business Processes and Information Technology - Ulric J. Gelinas 2010-08

Business Processes and Information Technology prepares students to effectively use, manage, and participate in the development of information technology applications in support of common business processes. The text focuses on the interconnections among an organization's management, business processes, information systems, and information technology. An emphasis is given throughout the text to the governance, control, and security of business processes and information systems, especially underlying financial information systems. After studying this text, a student will walk away with an understanding of the foundation tools and knowledge required for the analysis, design, and control of IT-driven business processes using current and emergent technologies.

The Routledge Companion to Accounting Information Systems - Martin Quinn 2017-12-22

Information technology has permeated all walks of life in the past two decades. Accounting is no exception. Be it financial accounting, management accounting, or audit, information technology and systems have simplified daily tasks and routine work, simplified reporting, and changed how accounting is done. The Routledge Companion to Accounting Information Systems provides a prestige reference work which offers students and researchers an introduction to current and emerging scholarship in the discipline. Contributions from an international cast of authors provides a balanced view of both the technical underpinnings and organisational consequences of accounting information systems. With a focus on the business consequences of technology, this unique reference book will be a vital resource for students and researchers involved in accounting and information management.

The Routledge Handbook of Accounting Information Systems - Erik Strauss 2022-11-24

The Routledge Handbook of Accounting Information Systems is a prestige reference work offering a comprehensive overview of the state of current knowledge and emerging scholarship in the discipline of AIS. The pace of technological-driven change is rapid, and this revised edition provides a deeper focus on the technical underpinnings and organisational consequences of accounting information systems. It has been updated to capture the changes in technology since the previous edition. It now includes chapters and scholarly thought on artificial intelligence, predictive analytics and data visualisation, among others. Contributions from an international cast of authors provide a balanced overview of established and developing themes, identifying issues and discussing relevant debates. The chapters are analytical and engaging. Many chapters include cases or examples, and some provide additional resources for readers. The chapters also provide a reflection on where the research agenda is likely to advance in the future. This is a complete and indispensable guide for students and researchers in accounting and accounting information systems, academics and students seeking convenient access to an unfamiliar area, as well as established researchers seeking a single repository on the current debates and literature in the field.

Accounting Information Systems - James A. Hall 2001 Accounting Information Systems, 3e provides thorough and up-to-date coverage of accounting information systems and related technologies. It features an early presentation of transaction cycles plus a special emphasis on ethics, fraud, and the modern manufacturing environment. The number-one Enterprise Resource Planning system, SAP, has been integrated into this new edition. Featuring screen shots of the SAP Web site in the text and a password that links students to a specially created SAP Web site, Hall is the only text on the

market to give students hands-on exposure to ERP. Also new to this edition are chapters on such cutting-edge topics as the Resources, Events, and Agents (REA) approach, Enterprise Resource Planning (ERP) systems, and Electronic Commerce systems. Hall assumes that the student is familiar with fundamental accounting principles and basic computer concepts and terminology and has been exposed to computer programming. Hall's focus is on the needs and responsibilities of accountants as end users of systems, systems designers, and auditors.
