Technological Dictionary of Plastics Materials - W.V. Titow 1998-08-21
The 20th Century World has been transformed by the discovery and use of plastics. Today plastic materials are used in a wide variety of applications, from building and construction to packaging, from sports equipment to transportation. The vast number of plastics materials discovered over the past 40 years and their wide range of properties make them uniquely suited to a very broad spectrum of applications. This combination of the successful utilisation of the materials and the number of types of material available has led to the growth of an array of technical terms within the field. The Dictionary is intended as a reference tool for readers to negotiate these terms. The main part of the Technical Dictionary of Plastics Materials presents a comprehensive set of extended definitions of technical terms relating to all facts of the materials aspect of plastics technology. The definitions cover the nature of plastics materials, their composition (including relevent non-polymeric componants and additives, such as stabilisers, fillers, colourants, etc), their properties (including methods of property determination, testing, and evaluation), their applications, and their handling and behaviour in processing. In many cases reference is given to the relevant technical standards from the International (ISO), British (BSI), and American (ASTM) standards. In addition to the main part of the Dictionary containing the definitions there are two further sections. The first gives explanations of the abbreviated terms (letter symbols) used for the parent polymer and for the other

constituents of plastics materials, while the second identifies the trade names of a number of plastics materials and their components.

Die für den Forschungs-und Entwicklungsprozeß in Wissenschaft und Praxis benötigten Informatio nen werden in zunehmendem Maße über Datenbanken zur Verfügung gestellt, die den direkten Zugriff auf Literaturhinweise, auf Fakten oder auch auf den Volltext eines Dokumentes gestatten. Die Bundesregierung fördert den Aufbau derartiger Datenbanken, da sie der Überzeugung ist, hiermit einen Beitrag zur Schaffung optimaler Voraussetzungen für den wissenschaftlichen Fortschritt und den industriellen Innovationsprozeß zu erbringen. Die gerade in der Bundesrepublik auf einer anerkannten Tradition beruhenden gedruckten Informationsdienste verlieren gegenüber elektroni scher Fachinformation aber keineswegs an Bedeutung, da sie als preiswerte Nachschlagewerke jederzeit verfügbar sind. Mit den vorliegenden ersten

Bänden der Datensammlung "Kunststoffe - Technische Daten von Handelsprodukten " liegt ein Werk vor, das auf der Datenbank POL YMAT aufbaut. Diese Daten bank des Deutschen Kunststoff-Instituts wird vom Fachinformationszentrum Chemie über das Fachinformationszentrum Karlsruhe im internationalen Verbundsystem Scientific and Technical Information Network (STN) im Online-Zugriff angeboten. Im vorliegenden Werk sehe ich einen wichtigen Beitrag zur Forschung und Entwicklung in einem immer bedeutender werdenden Werkstoffbereich und bin davon überzeugt, daß hiermit allen auf diesem Gebiet Tätigen ein nützliches und gerne genutztes Informationsmittel in die Hand gegeben wird. Dr. Albert Probst Parlamentarischer Staatssekretär im Bundesministerium für Forschung und Technologie Vorwort Die vorliegende Sammlung technischer Daten soll Konstrukteuren, Verarbeitern und Anwendern von Kunststoffen den Überblick über das Werkstoffangebot erleichtern. Sie soll bei der Werkstoffauswahl unterstützen und den Zugriff auf die für moderne, rechner-gestützte Fertigungsverfahren erforder lichen Daten vereinfachen.

The contents of the volume focus on structural integrity, life prediction, and condition monitoring which are reclassified under the domains of aerospace, fracture mechanics, fatigue, creep-fatigue interactions, civil structures, experimental techniques, computation mechanics, structural health monitoring, nondestructive testing, failure analysis, materials processing, stress corrosion cracking, reliability and risk analysis. This book will be a useful reference for students, researchers and practitioners.

Stabilization and Solidification of Hazardous, Radioactive, and Mixed Wastes - Roger D. Spence 2004-12-28
The development of stabilization and solidification techniques in the field of waste treatment reflects the efforts to better protect human health and the environment with modern advances in materials and technology. Stabilization and Solidification of Hazardous, Radioactive, and Mixed Wastes provides comprehensive information including case studies, selection criteria, and regulatory considerations on waste characterization, contaminant transport and leachability, testing methods for stabilized waste forms, and the interactions between contaminants and stabilizing components.

The book describes various systems based on cement technology that are used for stabilization and solidification of wastes. It demonstrates how to design a stabilized waste form, including the use of statistical techniques for generating response surface models for large, complicated applications. It provides guidelines for the selection of bonding materials, such as hydraulic cements, polymers, and hydroceramics, and discusses several additives and sorbents used to enhance immobilization, binder properties, and contaminant stabilization. The book portrays the transport mechanisms of contaminants in treated wastes and how to predict the transport of contaminants with various mathematical models. Following a discussion of waste types, principles, and properties of cemented waste forms, such as microstructure and durability, it outlines the test methods used to evaluate them. Fusing research, technology, and general practice principles taken from the firsthand experience of scientists, engineers, regulators, and teachers, Stabilization and Solidification of Hazardous, Radioactive, and Mixed Wastes can be used in advanced environmental engineering courses and as a reference for stabilization and solidification engineers, technology vendors and buyers, laboratory technicians, scientists, environmentalists, policymakers, and managers in treatment storage and disposal facilities.

Woldman's Engineering Alloys - John P. Frick

2000-01-01
Annotation New edition of a reference that presents the values of properties typical for the most common alloy processing conditions, thus providing a starting point in the search for a suitable material that will allow, with proper use, all the necessary design limitations to be met (strength, toughness, corrosion resistance and electronic properties, etc.) The data is arranged alphabetically and contains information on the manufacturer, the properties of the alloy, and in some cases its use. The volume includes 32 tables that present such information as densities, chemical elements and symbols, physical constants, conversion factors, specification requirements, and compositions of various alloys and metals. Also contains a section on manufacturer listings with contact information. Edited by Frick, a professional engineering consultant. Annotation c. Book News, Inc., Portland, OR (booknews.com).

PVC Plastics - W. V. Titow 2012-12-06
This book originated from my Publisher's request for anew, concise account of PVC plastics in terms of their nature, properties, process ing, and applications. There is thus, inevitably, an extensive thematic overlap with my-still relatively recent-PVC Technology (4th edi tion), and I have drawn liberally on that source for a substantial amount of relevant basic material. However, the present book is by no means merely an abridgement of the earlier one: whilst indeed considerably shorter, it is not only comparable in scope and general coverage of the subject, but also contains much new information. I have made a point of again strongly featuring the numerous standards relevant-and in many cases cardinal-to the

testing and characterisa tion of PVC materials and products, and to the evaluation of their properties and performance: these standards are an indispensable part of the technology of PVC plastics, and nobody concerned with any aspect of this complex subject should fail to recognise that fact. It is ever a pleasure to express appreciation and thanks where they are due. I am grateful to Dipl-Ing. H. E. Luben of Brabender OHG, Duisburg, FRG, not only for the up-to-date information he provided on Brabender equipment, but also most particularly for his exception ally friendly, helpful attitude in all our contacts, and for the trouble he took to make some illustrations and figures available in the form convenient for direct reproduction.
