Auto Spray Paint Learning - Ryson Fernandes 2020-01-07

I am writing this book especially for people like me who wanted to learn spray painting and for people who want to paint their own vehicles by themselves, as you know that there is very less knowledge about this topic in the Indian market.I have struggled a lot to get information about the painting, but actually, there is nobody who really wants to share anything about their skill.I finally managed to get some people to whom I paid to get useful information about spray painting and so I started with

autospraypaintlearning.com to answer all the questions and problems which you are facing. In this book, I will share some of the important information which you will need to start off with the spray painting. If you follow instructions from this book for sure, you will be able to accomplish painting your vehicle flawlessly, and it will even improve your skills. Spray painting is not as easy as you think it is, if you are really interested in it then only you should jump further in this book. It is not just about spraying the paint, the more important part of painting is the preparation on the surface for painting, once you have prepared the surface well then only you can get good results, believe me even a slight flaw in your prep will show once you spray the paint. So the moral is you will need lots of patience while doing this, you will get errors, you will mess up somewhere, but that is the part of learning, if you mess up somewhere that doesn't mean that you will not be able to do it, I have messed up many times and I have learned well from it, believe me, this mess will make you a better painter. This guide will give you all the information that you will need to do basic bodywork like removing the dents, laying the primer, sanding the surface for painting and laying the clear coat. The major topic I want to discuss here is safety, most people neglect this topic and then finally end up in a hospital, and that is the end of their carrier. Make safety your first priority as you will be dealing with harmful chemicals here so make sure you protect your lungs and hands properly, always wear respiratory mask and gloves while handling paints, thinners, reducers, primers, hardeners, and clear coats etc. and of course, use your common sense. Preparing the body for painting is the most important stage in any paint job, if you did not prepare your body well then for sure that you will not get good results. This book can take you to the professional level if you follow each and everything from it carefully. It is a complete step by step guide on how to spray paint your bike, car or just anything else. The process is the same for everything, you just have to know the right process and paint like a professional. This book will cover topics on: *Safety *Tools you will need *Body preparation *Applying putty *Laying primers *Spray painting tips and tricks *Colour sanding and buffing

Waterborne Paint Exposure in the Auto Body Collision Repair Industry - Grace Liao 2015

Objectives: The purpose of this study was to characterize workers' exposures to emerging waterborne coatings used in automotive refinishing systems and observe other work practices associated with using these products. Methods: Ten auto body shops in King County, Washington that use waterborne coatings were recruited to participate in this study. Based on reviews of Material Safety Data Sheets (MSDSs) from commonly used waterborne basecoats, 14 target compounds were selected to characterize exposures to components of these products. Task-based personal air sampling was conducted on 11 painters when applying basecoats. Sampling results were summarized and compared to MSDSs and historical exposure studies of solvent-based paints. Painters' work practices were also recorded to determine other possible routes of exposure. Work practices recorded included the use of Personal Protective Equipment (PPE), gun-cleaning procedures, waste disposal, and paint booth maintenance. Results: Breathing zone concentrations of aromatic hydrocarbons and polar volatile organic compounds were typically below their respective method limits of quantitation (MLOQ). On average, 11% (SD= 16%) of the aromatic hydrocarbon samples and 23% (SD=19%) of the polar compound samples exceeded their respective MLOQs. All analyte concentrations had threshold limit value (TLV) parametric exceedance fractions below 0.03, and National Institute of Occupational Safety and Health (NIOSH) odor parametric exceedance fractions below 0.05. VOC exposures when spraying waterborne paints were up to 56 times lower than historical studies on VOC exposures to solvent-based paints. Procedures for cleaning paint guns and disposing of waterborne paint wastes varied between shops. Several shops disposed of waste in the municipal solid waste stream without chemical characterization, in violation of state regulations. Painters were observed using lacquer thinner to clean their waterborne paint guns, which is not recommended by manufacturers. Painters were also observed handling waterborne waste with inadequate exposure controls. We observed that the air flow rates in spray booths typically failed to meet OSHA requirements. Conclusions: Workers' exposures to target compounds when applying waterborne basecoats were typically below their respective MLOQs and regulatory limits. The

typical PPE worn by painters should be adequate to protect painters from possible exposures. This study also shows that the waterborne paint exposures during spraying are lower than the historical exposures due to spraying solvent-based paints. However, without maintaining adequate airflow in the paint booths and adequate guidelines for all aspects of handling the paints, workers can still be at risk of exposures to waterborne paints and other chemicals used during non-spraying operations. Therefore, more information is needed on the chemical composition of the waste generated from waterborne paint systems to establish best practices for spray gun cleaning and waste disposal.
