BABOK V3. 0 Study Tables - Richard Larson 2016-06-15

ECBA Revision Guide - Amit Lingarchani 2020-07-27

It is our pleasure to present the second edition of this book. The first edition was released couple of years back. Since then we wanted to add several things to enable revision of BABOK more meaningful and quicker. So, here we are. Our objective to write this book was to create a concise revision guide for Business Analysis Body of Knowledge (BABOK) guide v3.0. BABOK is a big book with around five hundred pages and revising BABOK can be cumbersome. So, how does it help you in revising? One of the proven revision approaches is to create notes. We conceptualized this revision guide as notes. So, the first edition was written as notes based on BABOK. It simply summarized BABOK v3 and was much smaller than BABOK. However, we wanted to make it more meaningful for all the readers. So, we have now added concept notes, mock questions, crosswords, and matchmaking. We have also added examples at the end of Techniques chapter. The examples are added to help you see the real-life usage of the technique. It is added for selected techniques. The guide is meant for professionals who are planning to undertake ECBA certification examination. This revision guide covers these BABOK chapters - key concepts, all the six Knowledge Areas, Perspectives, and all the 50 Techniques. For the best results, this revision guide must be picked up after you have gone through the BABOK guide once. You will find all the key aspects of BABOK in this guide. This means that you do not need to pick up BABOK again. Cheers and all the best for your exam! Abhishek Srivastava Amit Lingarchani

The World in Your Head - Steven M. Lehar 2003-01-30

The World In Your Head: A Gestalt View of the Mechanism of Conscious Experience represents a bold assault on one of the greatest unsolved mysteries in science: the nature of consciousness and the human mind. Rather than examining the brain and nervous system to see what they tell us about the mind, this book begins with an examination of conscious experience to see what it can tell us about the brain. Through this analysis, the first and most obvious observation is that consciousness appears as a volumetric spatial void, containing colored objects and surfaces. This reveals that the representation in the brain takes the form of an explicit volumetric spatial model of external reality. Therefore, the world we see around us is not the real world itself, but merely a miniature virtual-reality replica of that world in an internal representation. In fact, the phenomena of dreams and hallucinations clearly demonstrate the capacity of the brain to construct complete virtual worlds even in the absence of sensory input. Perception is somewhat like a guided hallucination, based on sensory stimulation. This insight allows us to examine the world of visual experience not as scientists exploring the external world, but as perceptual scientists examining a rich and complex internal representation. This unique approach to investigating mental function has implications in a wide variety of related fields, including the nature of language and abstract thought, and motor control and behavior. It also has implications to the world of music, art, and dance, showing how the patterns of regularity and periodicity in space and time--apparent in those aesthetic domains--reflect the periodic basis set of the underlying harmonic resonance representation in the brain.
