[Introduction to Coordination Chemistry](#) - Geoffrey A.

Lawrance 2013-03-15

At the heart of coordination chemistry lies the coordinate bond, in its simplest sense arising from donation of a pair of electrons from a donor atom to an empty orbital on a central metalloid or metal. Metals overwhelmingly exist as their cations, but these are rarely met 'naked' - they are clothed in an array of other atoms, molecules or ions that involve coordinate covalent bonds (hence the name coordination compounds). These metal ion complexes are ubiquitous in nature, and are central to an array of natural and synthetic reactions. Written in a highly readable, descriptive and accessible style [Introduction to Coordination Chemistry](#) describes properties of coordination compounds such as colour, magnetism and reactivity as well as the logic in their assembly and nomenclature. It is illustrated with many examples of the importance of

coordination chemistry in real life, and includes extensive references and bibliography. Introduction to Coordination Chemistry is a comprehensive and insightful discussion of one of the primary fields of study in Inorganic Chemistry for both undergraduate and non-specialist readers.

Multiple Choice - Alejandro Zambra 2016-07-19

A "brilliant, innovative, beautiful" (The Guardian) book from the acclaimed author of Chilean Poet "Dazzling . . . a work of parody, but also of poetry." —The New York Times Book Review NAMED ONE OF THE BEST BOOKS OF THE YEAR BY NPR, THE GUARDIAN, AND THE IRISH TIMES "Latin America's new literary star" (The New Yorker), Alejandro Zambra is celebrated around the world for his strikingly original, slyly funny, daringly unconventional fiction. Now, at the height of

his powers, Zambra returns with his most audaciously brilliant book yet. Written in the form of a standardized test, Multiple Choice invites the reader to respond to virtuoso language exercises and short narrative passages through multiple-choice questions that are thought-provoking, usually unanswerable, and often absurd. It offers a new kind of reading experience, one in which the reader participates directly in the creation of meaning, and the nature of storytelling itself is called into question. At once funny, poignant, and political, Multiple Choice is about love and family, authoritarianism and its legacies, and the conviction that, rather than learning to think for ourselves, we are trained to obey and repeat. Serious in its literary ambition and playful in its execution, it confirms Alejandro Zambra as one of the most important writers working in any language. NAMED A BEST BOOK OF THE SUMMER BY THE WALL STREET JOURNAL, ELLE, THE

Leadership, Authority and Representation in British Muslim Communities - Sophie Gilliat-Ray 2021-01-26

The contributions explore Muslim religious leadership in multiple forms and settings. While traditional authority is usually correlated with theology and piety, as in the case of classically trained ulema, the public advocacy of Muslim community concerns is often headed by those with professionalized skillsets and civic experience. In an increasingly digital world, both women and men exercise leadership in novel ways, and sites of authority are refracted from traditional loci, such as mosques and seminaries, to new and unexpected places. This collection provides systematic focus on a topic that has hitherto been given rather diffuse consideration. It complements historical work on community leadership as well as more contemporary discussion on the training and role of Islamic religious authorities. It will be of interest to scholars in Religious

Studies, Sociology, Political Science, History, and Islamic Studies.

Macromolecules - Hans-Georg Elias 2013-06-29

Like so many of its kind, this textbook originated from the requirements of teaching. While lecturing on macromolecular science as a required subject for chemists and materials scientists on the undergraduate, graduate, and postgraduate levels at Swiss Federal Institute of Technology at Zurich (1960-1971), I needed a one-volume textbook which treated the whole field of macromolecular science, from its chemistry and physics to its applications, in a not too elementary manner. This textbook thus intends to bridge the gap between the often oversimplified introductory books and the highly specialized texts and monographs that cover only parts of macromolecular science. This first English edition is based on the third

German edition (1975), which is about 40% different from the first German edition (1971), a result of rapid progress in macromolecular science and the less rapid education of the writer. This text intends to survey the whole field of macromolecular science. Its organization results from the following considerations. The chemical structure of macromolecular compounds should be independent of the method of synthesis, at least in the ideal case. Part I is thus concerned with the chemical and physical structure of macromolecules. Properties depend on structure. Solution properties are thus discussed in Part II, solid state properties in Part III. There are other reasons for discussing properties before syntheses: For example, it is difficult to understand equilibrium polymerization without knowledge of solution thermody of the glass temperature, etc.
