TERP10 - SAP ERP - Integration of Business Processes - SAP-Aktiengesellschaft Systeme, Anwendungen, Produkte in der Datenverarbeitung (Walldorf, Heidelberg) 2009

Facility Management - Alexander Redlein 2004-08

Integration of processes and supporting IT tools is a key factor for successful Facility Management. After a review of the present situation of Facility Management the author describes an integrated" process model for the conception, planning and construction processes of facilities, providing integration into the whole life cycle. The target costing method is presented as a means to grant proper conception, planning and construction in accordance with the needs of the investor, the user and the operator. To be able to provide figures for the target costing methodology, a concept for efficient IT process support during the utilisation phase is developed. This includes two levels: the operative level and the controlling level based on the data of the operative processes. The concept is based on standard reference models of the key FM processes of the utilisation phase and on an analysis of the existing functionality of the relevant IT tools. A concept for the integration of existing IT tools is presented, that provides the necessary interaction and data exchange to support the newly introduced parts of the workflow. Based on this integration unified objects are defined, combining the distributed information of the FM business objects. This results in a joint FM database structure. The support of the operative processes and the joint data structure enable standardised calculation of benchmarks for controlling purposes. Finally, these benchmarks are the basis for a statistical method that allows the calculation of the utilisation costs in the conception phase.

Managing Enterprise Resource Planning Adoption and Business Processes - Chuck C.H. Law

2019-04-03

The recent decades have witnessed many ERP failures attributable to a plethora of mistakes, and the author writes this book aiming to correct these malpractices concerning ERP adoption. The author presents an adoption methodology, called the Full Lifecycle ERP Adoption Reference (FLEAR) model, to promote holistic project management. Furthermore, from a holistic perspective, successful ERP adoption cannot be achieved in isolation of other business and organizational issues such as IT-business strategic alignment, IT governance, change management, and business process changes. Unlike many ERP books in the market which cover mostly technical deployment issues, this book also addresses the aforesaid business-related issues. Theoretical discussions are supported by extensive research, and practical experience drawn from North American and international contexts to benefit practitioners involved in international assignments. Thus, this book will benefit not only MIS personnel, but also non-technical business practitioners. It will also be a useful supplement for university-level MIS and business process management courses.
