**Self Comes to Mind** - Antonio Damasio 2010-11-09

A leading neuroscientist explores with authority, with imagination, and with unparalleled mastery how the brain constructs the mind and how the brain makes that mind conscious. Antonio Damasio has spent the past thirty years researching and revealing how the brain works. Here, in his most ambitious and stunning work yet, he rejects the long-standing idea that consciousness is somehow separate from the body, and presents compelling new scientific evidence that posits an

evolutionary perspective. His view entails a radical change in the way the history of the conscious mind is viewed and told, suggesting that the brain's development of a human self is a challenge to nature's indifference. This development helps to open the way for the appearance of culture, perhaps one of our most defining characteristics as thinking and self-aware beings.

Leading the battle from the front are a bunch of passionate, straight-talking women: Fierce, man-hating Lividia; politically savvy Kripa; gutsy police officer Tara; the sultry Rani of Kantipur; and their unlikely motivator: twenty-year-old Evita, scarred by childhood memories of her mother's sexual encounters and fiercely committed to the Cause. As the women come together quietly, relentlessly, from all over the country, the rest of the world can only watch in stupefied silence. Will they win their war for justice? *The Mind of the Market* - Michael Shermer 2007-12-26

Bestselling author Michael Shermer explains how evolution shaped the modern economy--and why people are so irrational about money How did we make the leap from ancient hunter-gatherers to modern consumers and traders? Why do people get so emotional and irrational about bottom-line financial and business decisions? Is

the capitalist marketplace a sort of Darwinian organism, evolved through natural selection as the fittest way to satisfy our needs? In this eye-opening exploration, author and psychologist Michael Shermer uncovers the evolutionary roots of our economic behavior. Drawing on the new field of neuroeconomics, Shermer investigates what brain scans reveal about bargaining, snap purchases, and establishing trust in business. He scrutinizes experiments in behavioral economics to understand why people hang on to losing stocks, why negotiations disintegrate into tit-for-tat disputes, and why money does not make us happy. He brings together astonishing findings from psychology, biology, and other sciences to describe how our tribal ancestry makes us suckers for brands, why researchers believe cooperation unleashes biochemicals similar to those released during sex, why free trade promises to build alliances between nations, and how even capuchin monkeys get indignant if they don't get a fair reward for their work.

**Tutankhamun's Armies** - John Coleman Darnell 2007-08-03

The force that forged an empire. The furious thunder of thousands of hooves, the clatter and sheen of bronze armor sparkling in the desert sun, the crunch of wooden wheels racing across a rock-strewn battlefield—and leading this terrifying chariot charge, the gallant Pharaoh, the ribbons of his blue war crown streaming behind him as he launches yet another arrow into the panicking mass of his soon-to-be-routed enemies. While scenes like the one depicted above did occur in ancient Egypt, they represent only one small aspect of the vast, complex, and sophisticated military machine that secured, defended, and expanded the borders of the empire during the late Eighteenth Dynasty. In Tutankhamun's Armies, you'll discover the harsh reality behind the imperial splendor of the New Kingdom and gain a new appreciation for the formidable Egyptian army—from pharaoh to foot soldier. You'll follow "the heretic king" Akhenaten, his son Tutankhamun, and their three Amana-Period successors as they employ double-edge diplomacy and military might to defeat competing powers, quell internal insurrections, and keep reluctant subject states in line. This vivid and absorbing chronicle will forever change the way you think about the glories and riches of ancient Egypt.

**Mismeasure of Woman** - Carol Tavris 2017-08-29

When "man is the measure of all things," woman is forever trying to measure up. In this enlightening book, Carol Tavris unmaskes the widespread but invisible custom -- pervasive in the social sciences, medicine, law, and history -- of treating men as the normal standard, women as abnormal. Tavris expands our vision of normalcy by illuminating the similarities between women and men and showing that the real differences lie not in gender, but in power, resources, and life experiences. Winner of the American Association for Applied and Preventive Psychology's Distinguished Media Contribution Award

**The Believing Brain** - Michael Shermer 2011-05-24

The Believing Brain is bestselling author Michael Shermer's comprehensive and provocative theory on how beliefs are born, formed, reinforced, challenged, changed, and extinguished. In this work synthesizing thirty years of research, psychologist, historian of science, and the world's best-known skeptic Michael Shermer upends the traditional thinking about how humans form beliefs about the world. Simply put, beliefs come first and explanations for beliefs follow. The brain, Shermer argues, is a belief engine. From sensory data flowing in through the senses, the brain naturally begins to look for and find patterns, and then infuses those patterns with meaning. Our brains connect the dots of our world into meaningful patterns that explain why things happen, and these patterns become beliefs. Once beliefs are formed the brain begins to look for and find confirmatory evidence in support of those beliefs, which accelerates the process of reinforcing them, and round and round the process goes in a positive-feedback loop of belief confirmation. Shermer outlines the numerous cognitive tools our brains engage to reinforce our beliefs as truths. Interlaced with his theory of belief, Shermer provides countless real-world examples of how this process operates, from politics, economics, and religion to conspiracy theories, the supernatural, and the paranormal. Ultimately, he demonstrates why science is the best tool ever devised to determine whether or not a belief matches reality.

**The Rough and the Smooth** - Mo Barker 2006

Set against the background of glitzy West End London, this is a shocking tale of rape and the darker side of city living.

**Psychology in Perspective** - Carol Tavris 2001

Carol Tavris and Carole Wade once again set a new standard with this exciting alternative to traditional treatment of psychology. Psychology in Perspective, 3/e, responds to the American Association for the Advancement of Science's Project 2061, which calls upon all scientists to teach for depth of understanding rather than breadth of coverage. The authors have reorganized the traditional material according to the five major perspectives in the field and offer an unbiased presentation of each perspective's strengths, limitations, and misuses. The text emphasizes the importance of understanding all five approaches in order to grasp the "big picture" of human experience. Explains and studies human behavior from the biological, learning, cognitive, sociocultural, and psychodynamic perspectives. For individuals interested in an alternative approach to psychology.

**Why People Believe Weird Things** - Michael Shermer 2002-09-01

Revised and Expanded Edition. In this age of supposed scientific enlightenment, many people still believe in mind reading, past-life regression theory, New Age hokum, and alien abduction. A no-holds-barred assault on popular superstitions and prejudices, with more than 80,000 copies in print, Why People Believe Weird Things debunks these nonsensical claims and explores the very human reasons people find otherworldly phenomena, conspiracy theories, and cults so appealing. In an entirely new chapter, "Why Smart People Believe in Weird Things," Michael Shermer takes on science luminaries like physicist Frank Tipler and others, who hide their spiritual beliefs behind the trappings of science. Shermer, science historian and true crusader, also reveals the more dangerous side of such illogical thinking, including Holocaust denial, the recovered-memory movement, the satanic ritual abuse scare, and other modern crazes. Why People Believe Strange Things is an eye-opening resource for the most gullible among us and those who want to protect them.

**Mistakes Were Made (but Not by Me)** - Carol Tavris 2008

Two distinguished psychologists look at the role of self-justification in human life, explaining how and why we create fictions that absolve us of responsibility and restore our belief in our intelligence, moral rectitude, and correctness; assess the potential repercussions of such a course of action; and reveal how it can be overcome. Reprint.

**Beyond Feelings** - Vincent Ryan Ruggiero 2001

This succinct, interdisciplinary introduction to critical reasoning successfully dares students to question their own assumptions and to enlarge their thinking world through the analysis of the most common problems associated with everyday reasoning. **More Than A Movie** - Miguel Valenti 2018-04-24

In More Than a Movie, producer and entertainment attorney F. Miguel Valenti presents a compelling argument for the creative community to consider the consequences of its products, from movies to TV to the Internet. Valenti refrains from attacking the industries in which he himself works, but argues for reflection on the part of those who create media. More Than a Movie takes a pioneering first step toward outlining the issues in an insider fashion, and provides the tools to make ethical decisions about creating for the big and small screens. Edited by veteran media writer Les Brown and media consultant Laurie Trotta, More Than a Movie is written to stimulate debate in professional and academic arenas, and for the enjoyment of everyone who loves entertainment. The book contains a foreword by noted author and director Peter Bogdanovich, and commentary from producers Christine Vachon and David Brown. Mediascope, a Studio City, California-based media policy organization, commissioned the book upon discovering that ethical discussions seldom occur in film and television schools, although they are staples

for studying law, medicine, business and journalism. Issues range from ethnic and gender stereotyping to excessive and gratuitous violence."It's not about censorship -- it's about having a responsibility for what we do," says author Valenti (no relation to MPAA's Jack Valenti). "The book outlines how we are helping to shape societal values and individual behavior with the artistic choices we make." A team of writers from across the nation offer essays: Neil Hickey, editor, Columbia Journalism Review ; Annette Insdorf, Columbia University; Ted Pease, professor and columnist; Jack Pitman, Variety; Martin Koughan, Emmy Award-winning documentarian. The essays in More Than a Movie are interspersed with stories of actual ethical dilemmas told by noted screenwriters, directors and other practitioners in interviews by Manhattan writer Laura Blum.

Anger, the Misunderstood Emotion - Carol Tavris 1982

"This landmark book" (San Francisco Chronicle) dispels the common myths about the causes and uses of anger -- for example, that expressing anger is always good for you, that suppressing anger is always unhealthy, or that women have special "anger problems" that men do not. Dr. Carol Tavris expertly examines every facet of that fascinating emotion -- from genetics to stress to the rage for justice. Book jacket.

The Scientist and the Humanist - Marti Hope Gonzales 2011-01-07

Elliot Aronson is among the 100 most influential psychologists of the 20th Century. He is best known for his theorizing and research on cognitive dissonance theory -- one of the most provocative and enduring theories in contemporary psychology -- and for his design of the "jigsaw classroom," an applied method of reducing conflict and prejudice in multiethnic schools. Throughout his illustrious career, he has championed the application of social-psychological theory and methods for solving such pressing social problems as prejudice, energy efficiency, conflict and miscommunication in relationships, and the reasons why many people justify their mistakes rather than learn from them. Aronson is the only psychologist in the history of the American Psychological Association to have won all three of its top awards: for research, teaching, and writing. In this Festschrift, friends, colleagues, and former students write with warmth, clarity, and humor about Aronson's enduring influence on the field of social psychology and on their own professional lives as researchers, writers, and teachers. Topics covered include contemporary research on cognitive dissonance theory; the changing face of experimentation in social psychology; and applied research on energy policy, education, the legal system, intergroup conflict, and prejudice and discrimination.

**Balancing the Scales** - Marie A. Conn 2003

Balancing the Scales, a book of essays by faculty members of Chestnut Hill College in Philadelphia, is an exploration of the manipulation and transformation of symbolic concepts of women. A multidisciplinary collection, representing Art History, English, Spanish Language and Literature, Psychology, and Theology, this book hopes to raise awareness of the historical perception of women before and after the so-called patriarchal revolution. In the eighth century BCE, the Greek poet Hesiod changed the character of Pandora, a manifestation of the Great Earth Mother, into Pandora, the bringer of evil. This fundamental change in the nature of the female archetype influenced the biblical writers and their depiction of Eve. In the medieval period, artistic renderings of the Whore of Babylon and the Woman Clothed with the Sun resulted in cultic images of women as either whore (Eve) or pure virgin (Mary). The apparitions and miraculous images of the Black Madonna at Montserrat and Guadalupe show the persistence of the divine feminine in popular culture even as institutional religion denies her existence. The story of Cleopatra breaks open the question of why strong women are seen as frightening. The essays conclude with psychological study of the imbalance induced by millennia of patriarchal domination, resulting in the loss of the sacred feminine.

Invitation to Psychology - John P. Houston 2013-10-22

Invitation to Psychology provides an introduction to fundamental concepts in psychology. It seeks to address the need of both teachers and students by offering two different kinds of chapters. The first variety covers the basic data and research within each of the traditional areas of psychology. In these "basic" chapters, the authors provide up-to-date and complete coverage of important developments in each area. The second type of chapter is innovative. These

"exploring" chapters examine some of the practical applications and implications of the findings discussed in the basic chapters. These describe how basic psychological data are being used in the outside world, and discuss ongoing, often controversial explorations into some frontier areas of psychology. In other words, information about explorations and applications that is often scattered through

the pages of other texts is brought together into systematic chapters in this text. The dual-chapter approach helps resolve the dilemma of differing expectations of teachers and students. Key topics covered include the definition of psychology; the psychological basis of behavior; sensation and perception; states of awareness; learning, memory, and cognition; motivation and emotion; abnormal psychology and social behavior.
