Photograph Like a Thief - Glyn Dewis
2017-03-24

No photographer works in a vacuum. Photographers, like all artists, stand on the shoulders of those who came before them, and they are informed and influenced by those working around them contemporaneously. If you are striving to find your own style, one of the most powerful exercises you can practice is to find influence and inspiration in the work of those

around you, and then emulate that work in an effort to define, shape, and grow your own photographic voice. By collecting, imitating, and eventually reshaping and combining the work of those around you, your unique voice can be found and the quality of your work can soar. In *Photograph Like a Thief*, photographer, author, and retoucher Glyn Dewis embraces the idea of "stealing" and recreating others' work in order to improve as an artist. By "stepping inside" others' images, you can learn to reverse engineer their creation, then build an image yourself that simultaneously pays homage to that work yet is also an original creation itself. The book is divided into two parts. In Part 1, Glyn discusses his approach, covering the process of "stealing ideas" and

finding inspiration. He also covers the gear he uses, as well as his retouching and post-processing workflow. In a very helpful chapter on "reverse engineering" a photograph, Glyn discusses how to "read" an image by the catchlights, shadow position, and the hardness/softness of the shadows. This is a crucial skill to acquire if you want to recreate another's look. In Part 2, Glyn works through a series of images, from initial concept and influence to lighting, shooting, and post-processing the image to get to the final result. For each image, he reverse engineers the shot to describe how it was created and discusses how the image influenced him, then works through the gear he used, the lighting for the image, and the post-processing of

the image—from the RAW out-of-camera shot to the finished piece. While Glyn's work primarily focuses on portraiture, he finds inspiration and influence from a wide variety of work, from legendary photographers to animated films to book covers to movie posters. By working alongside Glyn in *Photograph Like a Thief*, you too can learn to find inspiration all around you, discover how that work can influence you, improve your photographic and post-processing skill set, and begin your own journey to defining your unique style. Who knows? Soon, others may be stealing from you.

Empowered Learning in Secondary Schools - Cynthia E. Hazel 2016

Positive youth development is a strengths-based, positive psychology approach to fostering adolescents' educational engagement and achievement. It focuses not just on students' academic development but also on their vocational, social, and emotional development. The positive youth development philosophy is at

the heart of Cynthia Hazel's unique model of secondary school change, which uses a multi-tiered system of support to challenge the status quo of widespread achievement gaps. In this thought-provoking book, Cynthia Hazel presents her positive youth development-multi-tiered system of support model, including its theoretical foundations, practical instructions for implementing the model, and case examples illustrating application. Recognising that students' own voices are critical to their empowerment and strong outcomes, the model calls for students to participate alongside parents, teachers, and administrators in designing and guiding the school's support structures. The resulting paradigm shift - truly empowered learning - offers hope for all

secondary schools, especially those in which many students currently do not achieve postsecondary success.

Democracy and Education - John Dewey

1916

. Renewal of Life by Transmission.
The most notable distinction between living and inanimate things is that the former maintain themselves by renewal. A stone when struck resists. If its resistance is greater than the force of the blow struck, it remains outwardly unchanged. Otherwise, it is shattered into smaller bits. Never does the stone attempt to react in such a way that it may maintain itself against the blow, much less so as to render the blow a contributing factor to its own continued action. While the living thing may easily be crushed by superior force, it none the less tries to turn the energies which act upon it into means of its own further existence. If it cannot do so, it does not just split into smaller pieces (at least in the

higher forms of life), but loses its identity as a living thing. As long as it endures, it struggles to use surrounding energies in its own behalf. It uses light, air, moisture, and the material of soil. To say that it uses them is to say that it turns them into means of its own conservation. As long as it is growing, the energy it expends in thus turning the environment to account is more than compensated for by the return it gets: it grows. Understanding the word "control" in this sense, it may be said that a living being is one that subjugates and controls for its own continued activity the energies that would otherwise use it up. Life is a self-renewing process through action upon the environment.

Fully Automated Luxury Communism -

Aaron Bastani 2020-06-16

A different kind of politics for a new kind of society--beyond work, scarcity and capitalism In the

twenty-first century, new technologies should liberate us from work. Automation, rather than undermining an economy built on full employment, is instead the path to a world of liberty, luxury and happiness—for everyone. Technological advance will reduce the value of commodities—food, healthcare and housing—towards zero. Improvements in renewable energies will make fossil fuels a thing of the past. Asteroids will be mined for essential minerals. Genetic editing and synthetic biology will prolong life, virtually eliminate disease and provide meat without animals. New horizons beckon. In Fully Automated Luxury Communism, Aaron Bastani conjures a vision of extraordinary hope, showing how we move to energy abundance, feed a world of 9 billion, overcome work,

transcend the limits of biology, and establish meaningful freedom for everyone. Rather than a final destination, such a society merely heralds the real beginning of history.
