Reading as a Perceptual Process - A. Kennedy 2000-08-04

This book is divided into five sections dealing with various fundamental issues in current research: attention, information processing and eye movement control; the role of phonology in reading; syntax and discourse processing and computational models and simulations. Control and measurement of eye movements form a prominent theme in the book. A full understanding of the where and when of eye movement control is a prerequisite of any complete theory of reading, since it is precisely at this

point that perceptual and cognitive processes interact. Amongst the 'hot topics' included are the relation between parafoveal and foveal visual processing of linguistic information, the role of phonology in fluent reading and the emergence of statistical 'tuning' approaches to sentence parsing. Also discussed in the book are three attempts to develop quantitative models of reading which represent a significant departure in theory-building and a quantum step in the maturation of reading research. Much of the work reported in the book was first presented at the 5th European Workshop on Language Comprehension organised in April 1998 which was held at the CNRS Luminy Campus, near Marseilles. All contributions summarise the state-of-the-art in the relevant areas of reading research.

Commercial Transactions Under the Uniform Commercial Code - Donald Barnett King 2011-01-01

View or download the free 2014 Online Supplement for this product. This

comprehensive casebook is intended for a broad survey course on commercial law. This edition includes transactions under the Convention of International Sales of Goods. This book is built around carefully selected and edited cases, author notes, and selected problems. Though including landmark cases, the authors emphasize cases decided since 1990. These newer cases offer both a more sophisticated discussion of problems than usually found in earlier cases, as well as more current analyses of Code ambiguities and conflicting approaches to certain Code sections. Each chapter begins with advice on reading the relevant sections of the UCC and Convention of International Sales of Goods, making the statutes more understandable for students. Major topics covered include Underlying Code Principles, Sales, Commercial Paper and Electronic Transfers, Banking and Bank-Customer Relations, Documents of Title, and Secured Transactions.

Study Reading - Eric H. Glendinning 2004-10-14

This is a second edition of an English for Academic Purposes title first published in 1992. It is designed to improve the reading skills of EFL

students at intermediate level or above who are preparing for a university course in English. Study Reading is a course for learners of intermediate level or above who need to develop their reading skills for study or work purposes. The book is divided into three parts. Part 1 introduces basic reading skills. Part 2 is theme based, with texts from a variety of disciplines, and aims to extend the skills introduced in Part 1. Part 3 covers the reading skills required for project, dissertation and thesis work. Study Reading encourages learners to reflect on their current reading strategies. By doing a variety of task-based, problem-solving activities, learners are encouraged to refine their reading strategies through exposure to the ideas of others. The book also gives direct advice on how to improve reading efficiency. Study Reading is part of a series, Study Writing, Study Listening, Study Speaking, Study Skills. Second Editions of Study Speaking, Listening and Skills will appear at the same time as the Second Edition of Study Reading. The Second Edition of Study Writing will appear in late 2005. Study Reading: - adopts a learner centred approach suitable for both classroom use and self-study. - has clearly labelled sections which allow users to select and focus on the skills areas most appropriate to their needs. - inclu

Cochrane Handbook for Systematic Reviews of Interventions - Julian P. T.
Higgins 2008-11-24

Healthcare providers, consumers, researchers and policy makers are inundated with unmanageable amounts of information, including evidence from healthcare research. It has become impossible for all to have the time and resources to find, appraise and interpret this evidence and incorporate it into healthcare decisions. Cochrane Reviews respond to this challenge by identifying, appraising and synthesizing research-based evidence and presenting it in a standardized format, published in The Cochrane Library (www.thecochranelibrary.com). The Cochrane Handbook for Systematic Reviews of Interventions contains methodological guidance for the preparation and maintenance of Cochrane intervention reviews. Written in a clear and accessible format, it is the essential manual for all

those preparing, maintaining and reading Cochrane reviews. Many of the principles and methods described here are appropriate for systematic reviews applied to other types of research and to systematic reviews of interventions undertaken by others. It is hoped therefore that this book will be invaluable to all those who want to understand the role of systematic reviews, critically appraise published reviews or perform reviews themselves.

Solving PDEs in C++ - Yair Shapira 2012-06-07

In this much-expanded second edition, author Yair Shapira presents new applications and a substantial extension of the original object-oriented framework to make this popular and comprehensive book even easier to understand and use. It not only introduces the C and C++ programming languages, but also shows how to use them in the numerical solution of partial differential equations (PDEs). The book leads readers through the entire solution process, from the original PDE, through the discretization stage, to the numerical solution of the resulting algebraic system. The high level of abstraction available in C++ is particularly useful in the implementation of complex mathematical objects, such as unstructured mesh, sparse matrix, and multigrid hierarchy, often used in numerical

modeling. The well-debugged and tested code segments implement the

numerical methods efficiently and transparently in a unified object-oriented approach.
