School-based Research - Elaine Wilson

2009-01-18

This book will provide a very valuable resource for developing teachers and their University tutors. There is great breadth and depth in reflections upon different aspects of researching school based practice and the reader is guided carefully through the challenging processes of devising enquiries, collecting evidence, analysing data and writing up research. The book can be used on different levels - from quick reference to thorough analysis on research methodology. The examples drawn from the work of new researchers on M level PGCEs and MA programmes provide excellent models for reflection' - Simon Thompson, Director of Initial Teacher Education at the University of Sussex

The new M-level PGCE courses require trainee teachers to demonstrate the ability to systematically research their own practice during professional placements. This book is designed to guide students through the research

process, supporting novice researchers as they build research skills. The book will help new teachers beginning to use research literature to ask questions about published work, showing that the nature of knowledge sought, and how such knowledge is justified, depends on the standpoint from which questions are asked, what sorts of answers are deemed researchable and the audience to whom results are to be addressed. It also contextualises methodological issues alongside key ideas which teachers are likely to be concerned with, such as ability grouping, pupil voice, pupil behaviour, teaching approaches and pupil motivation. Focused clearly on the needs of the new classroom researcher, this book is a thorough and thoughtful guide to the research process.

Registries for Evaluating Patient Outcomes - Agency for Healthcare Research and

Quality/AHRQ 2014-04-01

This User's Guide is intended to support the design, implementation, analysis, interpretation, and quality evaluation of registries created to increase understanding of patient outcomes. For the purposes of this guide, a patient registry is an organized system that uses observational study methods to collect uniform data (clinical and other) to evaluate specified outcomes for a population defined by a particular disease, condition, or exposure, and that serves one or more predetermined scientific, clinical, or policy purposes. A registry database is a file (or files) derived from the registry. Although registries can serve many purposes, this guide focuses on registries created for one or more of the following purposes: to describe the natural history of disease, to determine clinical effectiveness or cost-effectiveness of health care products and services, to measure or monitor safety and harm, and/or to measure quality of care. Registries are classified according to how

their populations are defined. For example, product registries include patients who have been exposed to biopharmaceutical products or medical devices. Health services registries consist of patients who have had a common procedure, clinical encounter, or hospitalization. Disease or condition registries are defined by patients having the same diagnosis, such as cystic fibrosis or heart failure. The User's Guide was created by researchers affiliated with AHRQ's Effective Health Care Program, particularly those who participated in AHRQ's DEcIDE (Developing Evidence to Inform Decisions About Effectiveness) program. Chapters were subject to multiple internal and external independent reviews.
