Which Way Next - Richard Meredith 2004-02

Another true-life travel adventure from the Balding Backpacker; one of the epic tales of modern motoring history. In the late summer of 2003, middle-aged adventurer Richard Meredith and a young student companion borrowed a small family hatchback from General Motors and drove it halfway round the world. GM were hoping to publicise the bankrupt Daewoo car

business they bought in South Korea after founder Kim Woo Choong had disappeared with \$2billion of company cash. But they got more than they bargained for - and so did the intrepid duo, defying sandstorms, rioters and gun-totting rebels as they meandered across Europe, battled through the ranks of Taliban and al-Qaeda forces in Afghanistan, and juddered across India into Laos and Vietnam. 2011-02-01

Stephen Coonts' Deep Black: Death Wave continues the bestselling technothriller series.

Deep within the NSA is Desk Three, a top-secret unit of special operatives inserted into the field when the threat is great and the response demands sensitivity and invisibility. Charlie Dean, a former Marine sniper, is a senior officer. With his colleagues Lia DeFrancesca and newcomer Ilya Akulinin, they form the core of a high-tech team known as Deep Black. Off the coast of Africa lie the beautiful Canary Islands, a resort destination of millionaires. Underneath this idyllic paradise is one of the most volatile fault lines in the world. There, an alliance between radical Islamic terrorists and a rogue element of the Chinese government is planning to unleash an act of unimaginable geological terrorism that could devastate the U.S. East Coast, striking it with waves up to a thousand feet high. They plan to set off nuclear devices to precipitate a gigantic landslide that will send a death-dealing tsunami across the Atlantic. In the Central Asian Republic of Tajikistan twelve nuclear warheads, stolen by the Russian Mafia, are about to be smuggled out

of the country and delivered into the hands of the conspirators. Charlie and Ilya go on an intercept mission, but before they can retrieve them, the weapons vanish. Meanwhile, in a hotel in New Jersey, a bestselling author is assassinated to prevent the release of his stranger-than-fiction story about an Islamic plot to change the course of history. Lia, Charlie's girlfriend, is sent to Berlin to infiltrate the empire of a ruthless Chinese billionaire whose machinations have come to the attention of the NSA. She risks immediate execution if her true identity is revealed. Their paths all converge in the Canary Islands. Unless the Deep Black team intervenes, the islands could be the epicenter of an apocalypse, with millions of lives---and the entire world order---at stake.

Automotive FDI in Emerging Europe - A. J. Jacobs 2017-07-05

This book examines the dramatic increase in automotive assembly plants in the former Socialist Central European (CE) nations of Czechia, East Germany, Hungary, Poland, and Slovakia from 1989 onwards. Enticed by relatively lower-wage labour and significant government incentives, the world's largest automakers have launched more than 20 passenger car assembly complexes in CE nations, with production accelerating dramatically since 2001. As a result, the annual passenger car production in Western Europe declined by more than 20% between 2001 and 2015, and alternatively in the CEE it increased by nearly 170% during this period. Drawing on case studies of 25 current and former foreign-run assembly plants, the author presents a rare

historical account of automotive foreign assembly plants in the CE following this dramatic geographic shift. This book will expand the knowledge of policy-makers in Europe in relation to their pursuits of FDI and will be of great interest to scholars and students of business, economic history, political science, and development.

American Multinationals and Japan - Mark Mason 2020-03-23

"This pioneering study of United States direct investment in Japan will interest academic specialists, business managers, and government

policymakers in America, Japan, and elsewhere. Drawing on rich historical materials from both sides of the Pacific, including corporate records and government documents never before made public, Mason examines the development of both Japanese policy towards foreign investment and the strategic responses of American corporations. This history is related in part through original case studies of Coca-Cola, Dow Chemical, Ford, General Motors, International Business Machines, Motorola, Otis Elevator, Texas Instruments, Western Electric, and Victor Talking Machine. The book seeks to explain why a little foreign direct investment has entered modern Japan. In contrast to the widely held view that emphasizes an alleged lack of effort on the part of foreign corporations, this study finds that Japanese restrictions merit greater attention. Many analysts of the modern Japanese political economy identify the Japanese government as the key actor in initiating such restrictions. Mason finds that the influence of Japanese

business has often proved more potent than these analysts suggest. This book offers fresh insights into both the operation of the modern Japanese political economy and of its relations with the world economy."

Box Boats - Brian J. Cudahy 2007-12-17
Fifty years ago--on April 26, 1956--the freighter Ideal X steamed from Berth 26 in Port Newark, New Jersey. Flying the flag of the Pan-Atlantic Steamship Company, she set out for Houston with an unusual cargo: 58 trailer trucks lashed to her top deck. But they weren't trucks--they were steel containers removed from their running gear, waiting to be lifted onto empty truck beds when Ideal X reached Texas. She docked safely, and a revolution was launched--not only in shipping, but in the way the world trades. Today, the more than 200 million containers shipped every year are the lifeblood of the new global economy. They sit stacked on thousands of "box boats" that grow more massive every year. In this fascinating book, transportation expert Brian Cudahy provides a vivid, fast-paced account of the container-ship revolution--from the maiden voyage of the Ideal X to the entrepreneurial vision and technological breakthroughs that make it possible to ship more goods more

cheaply than every before. Cudahy tells this complex story easily, starting with Malcom McLean, Pan-Atlantic's owner who first thought about loading his trucks on board. His line grew into the container giant Sea-Land Services, and Cudahy charts its dramatic evolution into Maersk Sealand, the largest container line in the world. Along the way, he provides a concise, colorful history of world shipping--from freighter types to the fortunes of steamship lines--and explores the spectacular growth of global trade fueled by the mammoth ships and new seaborne lifelines connecting Asia, Europe, and the Americas. Masterful maritime history, Box Boats shows how fleets of these ungainly ships make the modern world possible--with both positive and negative effects. It's also a tale of an historic home port, New York, where old piers lie silent while 40-foot steel boxes of toys and televisions come ashore by the thousands, across the bay in New Jersey.

The Global Automotive Industry - Paul Nieuwenhuis 2015-08-10

The automotive industry is still one of the world's largest manufacturing sectors, but it suffers from

being very technology-focused as well as being relatively short-term focused. There is little emphasis within the industry and its consultancy and analyst supply network on the broader social and economic impacts of automobility and of the sector that provides it. The Global Automotive Industry addresses this need and is a first port of call for any academic, official or consultant wanting an overview of the state of the industry. An international team of specialist researchers, both from academia and business, review and analyse the key issues that make vehicle manufacturing still the world's premier manufacturing sector, closely tied in with the fortunes of both established and newly emerging economies. In doing so, it covers issues related to manufacturing, both established practices as well as new developments; issues relating to distribution, marketing and retail, vehicle technologies and regulatory trends; and, crucially, labour practices and the people who build cars. In all this it explains both how the

current situation arose and also likely future trajectories both in terms of social and regulatory trends, as the technological, marketing and labour practice responses to those, leading in many cases to the development of new business models. Key features Provides a global overview of the automotive industry, covering its current state and considering future challenges Contains contributions from international specialists in the automotive sector Presents current research and sets this in an historical and broader industry context Covers threats to the industry, including globalization, economic and environmental sustainability The Global Automotive Industry is a must-have reference for researchers and practitioners in the automotive industry and is an excellent source of information for business schools, governments, and graduate and undergraduate students in automotive engineering.

[Moment Tensor Solutions](#) - Sebastiano D'Amico
2018-05-12

This book first focuses on the explanation of the theory about focal mechanisms and moment tensor solutions and their role in the modern seismology. The second part of the book compiles several state-of-the-art case studies in different seismotectonic settings of the planet. The assessment of seismic hazard and the reduction of losses due to future earthquakes is probably the most important contribution of seismology to society. In this regard, the

understanding of reliable determination seismic source and of its uncertainty can play a key role in contributing to geodynamic investigation, seismic hazard assessment and earthquake studies. In the last two decades, the use of waveforms recorded at local-to-regional distances has increased considerably. Waveform modeling has been used also to estimate faulting parameters of small-to-moderate sized earthquakes.
