What Should Schools Teach? - Alka Sehgal Cuthbert 2021-01-07

The design of school curriculums involves deep thought about the nature of knowledge and its value to learners and society. It is a serious responsibility that raises a number of questions. What is knowledge for? What knowledge is important for children to learn? How do we decide what knowledge matters in each school subject? And how far should the knowledge we teach in school be related to academic disciplinary knowledge? These and many other questions are taken up in *What Should Schools Teach?* The blurring of distinctions between pedagogy and curriculum, and between experience and knowledge, has served up a confusing message for teachers about the part that each plays in the education of children. Schools teach through subjects, but there is little consensus about what constitutes a subject and what they are for. This book aims to dispel confusion through a robust rationale for what schools should teach that offers key understanding to teachers of the relationship between knowledge (what to teach) and their own pedagogy (how to teach), and how both need to be informed by values of intellectual freedom and autonomy. This second edition includes new chapters on Chemistry, Drama, Music and Religious Education, and an updated chapter on Biology. A revised introduction reflects on emerging discourse around decolonizing the curriculum, and on the relationship between the knowledge that children encounter at school and in their homes.

The Corruption of the Curriculum - Shirley Lawes 2007

The authors of this book examine the British National Curriculum from several different perspectives and concentrate on various subject areas. The uniting theme between these essays is the argument that the subjects in the school curriculum used to be regarded as discrete areas of knowledge which would be imparted to pupils by teachers motivated by a love of learning, but that this has not been enough for recent governments who see schools as a means of promoting social and political goals that may or may not relate to traditional academic disciplines. The contributors to this book argue that we need to return to the traditional view of education as a means of transmitting a body of knowledge from one generation to the next, and that academic rigour and respect for the professionalism of teachers should take precedence over political manipulation of the curriculum.
