Nursing Research - Denise F. Polit 2020-02-12

"Research methodology is a dynamic enterprise. Even after writing 10 editions of this book, we have continued to draw new material and inspiration from ground-breaking advances in research methods and in nurse researchers' use of those methods. It is thrilling to share many of those developments in this new edition. We expect that many of the new methodologic and technological enhancements will be translated into powerful evidence for nursing practice. Four years ago, we considered the 10th edition as a watershed edition of a classic textbook, having added two new chapters. We are persuaded, however, that this 11th edition is even better than the previous one. We have retained many features that made this book a classic textbook and resource, including its focus on research as a support for evidence-based nursing, but have introduced important innovations that we hope will help to

shape the future of nursing research" --

This ground-breaking book brings together an academic, a clinician and a birth trauma activist. Each chapter discusses current research, women's stories, the common themes in the stories and the implications of these for practice, clinical case studies and a clinician's insights and recommendations for care. Topics covered include: mothers' perspectives, fathers' perspectives, the impact on breastfeeding, the impact on subsequent births, PTSD after childbirth and EMDR treatment for PTSD. This book is a valuable resource for health professionals who come into contact with new mothers, providing the most current and accurate information on traumatic childbirth.
