A Textbook of Fixed Prosthodontics - Stig Karlsson 2000

Restorative Gap Management in the Esthetic Zone - Konrad H. Meyenberg 2023-04-24

Today, adhesive techniques for partial crowns and bridges have become routine protocol, complementing established treatment options for fixed prosthodontics. Minimally invasive or noninvasive treatment options such as direct bonding with composite, veneers or resin-bonded bridges greatly help to reduce esthetic, technical, and biologic complications and increase the potential for reintervention. Therefore, these alternatives to anterior implants have gained increasing importance. Consequently, this book covers a wide spectrum of therapeutic means to deal with gaps in the anterior region. The content is divided into the following sub-themes: moving (the orthodontic approach), bonding (the restorative, noninvasive approach), placing pontics (the reconstructive approach with bonded or full-crown bridges), and placing implants (the implantologic approach).

dental implant support. It addresses both the behavioral and clinical aspects of diagnosis and treatment and covers treatment modalities including osseointegration, overdentures, implant-supported fixed prosthesis, and the current and future directions of implant prosthodontics. From lead editor and respected educator George Zarb, Prosthodontic Treatment for Edentulous Patients provides an atlas of clinical procedures and emphasizes the importance of evidence-based treatment. Short, easy-to-read chapters cover the essentials of care for both short- and long-term patients, stressing the importance of evidence-based treatment. Expanded coverage of implant prosthodontics addresses the clinical protocols for implant-retained and implant-supported prosthodontic management. Specific chapters address the three surfaces of the complete denture: (1) an impression or intaglio surface, (2) a polished surface, and (3) an occlusal surface, the integration of which is crucial to creating a stable, functional, and esthetic result. Chapter on health and nutrition examines a number of systemic conditions (vesciculoerosive conditions, systemic lupus erythematosus, burning mouth syndrome, salivary dysfunction, Sjögren's syndrome, hyper/hyposalivation, diabetes) that affect the oral cavity and specifically influence the prognosis for wearing complete dentures or for accepting osseointegrated prostheses. Chapter on the time-dependent changes which occur in the oral cavity focuses on both time-related direct (ulcer/cheek biting, irritation hyperplasia, denture stomatitis, flabby ridge and pendulous maxillary tuberosities, hyperkeratosis and oral cancer, residual ridge reduction) and indirect (atrophy of masticatory muscles, nutritional status and masticatory function, control of sequelae) changes in the oral environment, and provides strategies to minimize the risk of such changes. Chapter on the techniques used to prolong the life of complete dentures focuses on the two techniques used to extend the life of dentures: relining and rebasing, also touching on denture duplication. Well-respected editors and contributors are the leaders in their field, lending credibility and experience to each topic.
