Porsche 914 - Richard Gooding 2016-07-15

The Porsche 914 was born into consistently confusing and troubled times at Porsche and Volkswagen, not least with the idea of a non-911 Porsche horrifying many at the time. A Porsche with an engine that wasn't in the back was simply unthinkable. Richard Gooding examines the story of a car of mixed parentage, which against the odds became a success in its relatively short, six-and-a half year lifespan. Around 119,000 cars were sold from 1969 to 1975, outselling contemporary rivals such as the Opel

GT, and meaning it was the first mid-engined car to achieve six-digit sales. As a present-day classic, although challenging to some, low-slung looks and bright colours make the 1970s 914 period-perfect. Combined with near-ideal weight distribution and a low centre of gravity, its mid-engine layout means the 914 can achieve cornering G-forces comparable to the contemporary 911. The 914 was seen as a car that could inject a shot of glamour into VW's slightly worthy and dependable range of air-cooled cars. This book covers the history, development and manufacture of the 914 through troubled times at Porsche and Volkswagen and studies the impact of its design upon its successors. Buying and owning a 914 today is covered, and the book is illustrated with 218 colour photographs.

VW Camper Inspirational Interiors - David Eccles 2009-05-01

One of the main attractions of the VW Bus, apart from its iconic looks and rugged reliability, is the way owners take the bus to heart and into their family, and set about personalizing them through both exterior and interior design and styling. Designing and building [or commissioning] an interior that will service your own needs is a daunting yet exciting task, and within these pages you will find many different sorts of interior to admire and inspire. Some have been built on a budget from scratch by the owner, some have been adapted and revamped, others are bespoke one-offs, built to the owner's designs. Whatever your taste in camper design, there will be something to amaze and inspire in the pages of VW Camper Inspirational Interiors.

Land Rover Defender, 90 and 110 Range - James Taylor 2013-03-01

Land Rover Defender, 90 and 110 Range - 30 Years of the Coil-Spring 4x4 Models charts the evolution of the coil-sprung Defender vehicles.

When Land Rover switched from leaf springs to coil springs for their utility models in 1983, it was a major step forward. The first coil-sprung model, the One Ten, replaced the Series III 109s. The short-wheelbase Ninety replaced the Series III 88s in 1984. From 1990, the models were all re-branded as Land Rover Defenders - 90, 110 and 140 - as the Land Rover range expanded and the marketing teams wanted a new name. Topics covered include: Origins of the Defender and early Ninety and One Ten Models; Development and use of the long-wheelbase models; Special conversions and Defenders built outside the UK, including in Australia and South Africa; Military and emergency service use of the Defender; Detailed examinations of engines and engineering, and the focus on diesel power; The future of the Defender. Charts the evolution of the coil-sprung Defender vehicles - the early 90 and 110 models from 1983 to present day. A must buy for all Land Rover enthusiasts. Superbly illustrated with 300 colour photographs. James Taylor is a well-known writer on classic motoring and a specialist on the Land Rover marque.

Probability on Graphs - Geoffrey Grimmett 2018-01-25

This introduction to some of the principal models in the theory of disordered systems leads the reader through the basics, to the very edge of contemporary research, with the minimum of technical fuss. Topics covered include random walk, percolation, self-avoiding walk, interacting particle systems, uniform spanning tree, random graphs, as well as the Ising, Potts, and random-cluster models for ferromagnetism, and the Lorentz model for motion in a random medium. This new edition features accounts of major recent progress, including the exact value of the connective constant of the hexagonal lattice, and the critical point of the random-cluster model on the square lattice. The choice of topics is strongly motivated by modern applications, and focuses on areas that merit further research. Accessible to a wide audience of mathematicians and physicists, this book can be used as a graduate course text. Each chapter ends with a range of exercises.

Volume II - Oleg N Favorsky 2009-11-20

Thermal to Mechanical Energy Conversion: Engines and Requirements is a component of Encyclopedia of Energy Sciences, Engineering and Technology Resources in the global Encyclopedia of Life Support Systems (EOLSS), which is an integrated compendium of twenty one Encyclopedias. The Theme on Thermal to Mechanical Energy Conversion:

Engines and Requirements with contributions from distinguished experts in the field discusses energy. These three volumes are aimed at the following five major target audiences: University and College students Educators, Professional practitioners, Research personnel and Policy analysts, managers, and decision makers and NGOs.

The Strategic Dimensions of Environmental Management - Ulrich Steger

2016-07-27

Ecology has become an integral part of the strategic context in which corporations operate. This book examines fully the strategic issues, concepts and tools which managers must understand to sustain their own business competitiveness as society evolves toward a new definition of progress. In addition, it is argued that strategic environmental management provides an excellent learning context for the development of more general competitive capabilities.

Differential Forms in Algebraic Topology - Raoul Bott 2013-04-17

Developed from a first-year graduate course in algebraic topology, this text is an informal introduction to some of the main ideas of contemporary homotopy and cohomology theory. The materials are structured around four core areas: de Rham theory, the Cech-de Rham complex, spectral sequences, and characteristic classes. By using the de Rham theory of differential forms as a prototype of cohomology, the machineries of

algebraic topology are made easier to assimilate. With its stress on concreteness, motivation, and readability, this book is equally suitable for self-study and as a one-semester course in topology.

Multiple View Geometry in Computer Vision - Richard Hartley 2004-03-25

A basic problem in computer vision is to understand the structure of a real world scene given several images of it. Techniques for solving this problem are taken from projective geometry and photogrammetry. Here, the authors cover the geometric principles and their algebraic representation in terms of camera projection matrices, the fundamental matrix and the trifocal tensor. The theory and methods of computation of these entities are discussed with real examples, as is their use in the reconstruction of scenes from multiple images. The new edition features an extended introduction covering the key ideas in the book (which itself has been updated with additional examples and appendices) and significant new results which have appeared since the first edition. Comprehensive background material is provided, so readers familiar with linear algebra and basic numerical methods can understand the projective geometry and estimation algorithms presented, and implement the algorithms directly from the book.
