Pocket Book of Hospital Care for Children - World Health Organization 2013

The Pocket Book is for use by doctors nurses and other health workers who are responsible for the care of young children at the first level referral hospitals. This second edition is based on evidence from several WHO updated and published clinical guidelines. It is for use in both inpatient and outpatient care in small hospitals with basic laboratory facilities and essential medicines. In some settings these guidelines can be used in any facilities where sick children are admitted for inpatient care. The Pocket Book is one of a series of documents and tools that support the Integrated Managem.

Computational Social Science - Wei Luo 2021-02-18

Selected papers from the International Conference on New Computational Social Science, focusing on the following five aspects: Big data acquisition and analysis, Integration of qualitative research and quantitative research, Sociological Internet experiment research, Application of ABM simulation method in Sociology Research, Research and development of new social computing tools. With the rapid development of information technology, especially sweeping progress in the Internet of things, cloud computing, social networks, social media and big data, social computing, as a data-intensive science, is an emerging field that leverages the capacity to collect and analyze data with an unprecedented breadth, depth and scale. It represents a new computing paradigm and an interdisciplinary field of research and application. A broad comprehension of major topics involved in social computing is important for both scholars and practitioners. This proceedings presents and discusses key concepts and analyzes the state-of-the-art of the field. The conference not only gave insights on social computing, but also affords conduit for future research in the field. Social computing has two distinct trends: One is on the social science issues, such as computational social science, computational sociology, social network analysis, etc; The other is on the use of computational techniques. Finally some new challenges ahead are summarized,

including interdisciplinary cooperation and training, big data sharing for scientific data mashups, and privacy protect.

Pass the Canadian GED! -- Complete Canadian GED Study Guide and Practice Test Questions - Complete Test Preparation Inc.

Leading Professional Learning - Fiona Ell 2020-05

Today's school leaders are faced with the increasingly daunting task of leading their schools to improve, to innovate and to become ever more responsive to change. There are many resources to help schools to engage with improvement frameworks, but few that directly address the complexity of the challenges that inevitably arise along the way. Based on extensive research in the field, including the outcomes of a five-year project on school improvement and professional learning in Australia and

New Zealand, **Leading Professional Learning: Practical strategies for impact in schools** identifies the challenges that school leaders face when leading professional learning and development in their schools as part of an improvement agenda. Renowned professional development expert, Helen Timperley, has collaborated with a team of prominent authors, including Fiona Ell, Deidre Le Fevre and Kaye Twyford, to uncover the reasons underpinning these challenges and to provide practical strategies on how to address them. Case studies, excerpts from real teachers' experiences and step-by-step examples of useful strategies, including the spiral of inquiry, give school leaders the tools they need to tackle complex challenges in teaching, learning, curriculum delivery and pedagogical practice in both primary and secondary settings. **Leading Professional Learning: Practical strategies for impact in schools** is a hands-on resource for school leaders to identify specific professional learning and development issues that accompany the learning and change process and to overcome them in their schools.

Reliability, Yield, and Stress Burn-In - Way Kuo 2013-11-27

The international market is very competitive for high-tech manufacturers

to day. Achieving competitive quality and reliability for products requires leadership from the top, good management practices, effective and efficient operation and maintenance systems, and use of appropriate up-to-date engineering design tools and methods. Furthermore, manufacturing yield and reliability are interrelated. Manufacturing yield depends on the number of defects found during both the manufacturing process and the warranty period, which in turn determines the reliability. the production of microelectronics has evolved into Since the early 1970's, one of the world's largest manufacturing industries. As a result, an important agenda is the study of reliability issues in fabricating microelectronic products and consequently the systems that employ these products, particularly, the new generation of microelectronics. Such an agenda should include: • the economic impact of employing the microelectronics fabricated by industry, • a study of the relationship between reliability and yield, • the progression toward miniaturization and higher reliability, and • the correctness and complexity of new system designs, which include a very significant portion of software.

The Elements of Statistical Learning - Trevor Hastie 2013-11-11

During the past decade there has been an explosion in computation and information technology. With it have come vast amounts of data in a variety of fields such as medicine, biology, finance, and marketing. The challenge of understanding these data has led to the development of new tools in the field of statistics, and spawned new areas such as data mining, machine learning, and bioinformatics. Many of these tools have common underpinnings but are often expressed with different terminology. This book describes the important ideas in these areas in a common conceptual framework. While the approach is statistical, the emphasis is on concepts rather than mathematics. Many examples are given, with a liberal use of color graphics. It should be a valuable resource for statisticians and anyone interested in data mining in science or industry. The book's coverage is broad, from supervised learning (prediction) to unsupervised learning. The many topics include neural

networks, support vector machines, classification trees and boosting--- the first comprehensive treatment of this topic in any book. This major new edition features many topics not covered in the original, including graphical models, random forests, ensemble methods, least angle regression & path algorithms for the lasso, non-negative matrix factorization, and spectral clustering. There is also a chapter on methods for “wide” data (p bigger than n), including multiple testing and false discovery rates. Trevor Hastie, Robert Tibshirani, and Jerome Friedman are professors of statistics at Stanford University. They are prominent researchers in this area: Hastie and Tibshirani developed generalized additive models and wrote a popular book of that title. Hastie co-developed much of the statistical modeling software and environment in R/S-PLUS and invented principal curves and surfaces. Tibshirani proposed the lasso and is co-author of the very successful *An Introduction to the Bootstrap*. Friedman is the co-inventor of many data-mining tools including CART, MARS, projection pursuit and gradient boosting.
