Concepts of Biology - Samantha Fowler 2018-01-07

Concepts of Biology is designed for the single-semester introduction to biology course for non-science majors, which for many students is their only college-level science course. As such, this course represents an important opportunity for students to develop the necessary knowledge, tools, and skills to make informed decisions as they continue with their lives. Rather than being mired down with facts and vocabulary, the typical non-science major student needs information presented in a way that is easy to read and understand. Even more importantly, the content should be meaningful. Students do much better when they understand why biology is relevant to their everyday lives. For these reasons, Concepts of Biology is grounded on an evolutionary basis and includes exciting features that highlight careers in the biological sciences and everyday applications of the concepts at hand. We also strive to show the interconnectedness of topics within this extremely broad discipline. In order to meet the needs of today's instructors and students, we maintain the overall

organization and coverage found in most syllabi for this course. A strength of Concepts of Biology is that instructors can customize the book, adapting it to the approach that works best in their classroom. Concepts of Biology also includes an innovative art program that incorporates critical thinking and clicker questions to help students understand--and apply--key concepts.

Sputnik's Guide to Life on Earth - Frank Cottrell-Boyce 2016-04-07

Shortlisted for the 2017 Carnegie Medal and selected for the Tom Fletcher Book Club, Sputnik's Guide to Life on Earth by Frank Cottrell-Boyce is an

adventure about the Blythes: a big, warm, rambunctious family who live on a small farm and sometimes foster children. Now Prez has come to live with them. But, though he seems cheerful and helpful, he never says a word. Then one day Prez answers the door to someone claiming to be his relative. This small, loud stranger carries a backpack, walks with a swagger and goes by the name of Sputnik. The family all think Sputnik is a dog and chaos is unleashed as suddenly household items come to life – like a TV remote that fast-forwards people and a toy lightsaber that entertains guests at a children's party, until one of them is nearly decapitated by it – and Prez is going to have to use his voice to explain himself. As Sputnik takes Prez on a journey to finish writing his guidebook to Earth called Ten Things Worth Doing on Earth, each adventure seems to take Prez nearer to the heart of the family he is being fostered by, but they also take him closer to the day that he is due to leave them forever . . . This edition features fantastic cover artwork and black and white inside illustrations from the incredible Steven Lenton.

Heavens on Earth - Michael Shermer 2018-01-09

"In his most ambitious work yet, Shermer sets out to discover what drives humans' belief in life after death, focusing on recent scientific attempts to achieve immortality by radical life extensionists, extropians, transhumanists, cryonicists, and mind-uploaders, along with utopians who have attempted to create heaven on earth. For millennia, religions have concocted numerous manifestations of heaven and the afterlife, the place where souls go after the death of the physical body. Religious leaders have toiled to make sense of this place that a surprising 74% of Americans believe exists, but from which no one has ever returned to report what it is really like. Heavens on Earth concludes with an uplifting paean to purpose and progress and what we can do in the here-and-now, whether or not there is a hereafter" --

Collapse - Jared Diamond 2013-03-21

From the author of *Guns, Germs and Steel*, Jared Diamond's *Collapse: How Societies Choose to Fail or Survive* is a visionary study of the mysterious downfall of past civilizations. Now in a revised edition with a new afterword, Jared Diamond's *Collapse* uncovers the secret behind why some societies flourish, while others founder - and what this means for our future. What happened to the people who made the forlorn long-abandoned statues of Easter Island? What happened to the architects of the crumbling Maya pyramids? Will we go the same way, our skyscrapers one day standing derelict and overgrown like the temples at Angkor Wat? Bringing together new evidence from a startling range of sources and piecing together the myriad influences, from climate to culture, that make societies self-destruct, Jared Diamond's *Collapse* also shows how - unlike our ancestors - we can benefit from our knowledge of the past and learn to be survivors. 'A grand sweep from a master storyteller of the human race' - Daily Mail 'Riveting, superb, terrifying' - Observer 'Gripping ... the book fulfils its huge ambition, and Diamond is the only man who could have written it' - Economist 'This book shines like all Diamond's work' - Sunday Times

The Diversity Code - Michelle T. Johnson 2011

The most diligent compliance with laws and regulations can't foster true work place diversity. The best organizations have become genuine cross-cultural communities that believe equally in reconciling differences and valuing them. To that end, *The Diversity Code* promotes understanding by answering many of the toughest questions that professionals and their employers are often afraid to ask, including: * How do you define diversity-- what it is and isn't? * Am I "safe" simply following the law? * Can't we just acknowledge that we are the same and different--then get on with our work? * How do I handle diversity problems on my staff--or worse, with people who outrank me? * What do I do if I'm accused of something? * How do I institute change without ticking people off? Each chapter begins with a

challenging question, which the author answers based on years of experience as a diversity expert and attorney, and concludes with a real-world scenario and a chance for readers to test themselves on their knowledge.
