*Internal Desecration* - Carrie Doehring 1993

Overwhelming life experiences, such as physical and sexual abuse during childhood, have the potential to obliterate internal representations of a loving God. In this book the author explores the inter-relationship between severity of childhood traumatization and mental representations of God through a comprehensive review of psychodynamic literature and quantitative research methodology. The research findings of a study with forty seven women demonstrate the complexity of this subject and illustrate how the empirical truth of quantitative findings may or may not resonate with the metaphorical truth of psychodynamic models of traumatization. The author discusses the significance of these findings for clinicians and faith communities.

This book presents the papers from the Internal Combustion Engines: Performance, fuel economy and emissions held in London, UK. This popular international conference from the Institution of Mechanical Engineers provides a forum for IC engine experts looking closely at developments for personal transport applications, though many of the drivers of change apply to light and heavy duty, on and off highway, transport and other sectors. These are exciting times to be working in the IC engine field. With the move towards downsizing, advances in FIE and alternative fuels, new engine architectures and the introduction of Euro 6 in 2014, there are plenty of challenges. The aim remains to reduce both CO2 emissions and the dependence on oil-derivate fossil fuels whilst meeting the future, more stringent constraints on gaseous and particulate material emissions as set by EU, North American and Japanese regulations. How will technology developments enhance performance and shape the next generation of designs? The book introduces compression and internal combustion engines' applications, followed by chapters on the challenges faced by alternative fuels and fuel delivery. The remaining chapters explore current improvements in combustion, pollution prevention strategies and data comparisons. presents the latest requirements and challenges for personal transport applications gives an insight into the technical advances and research going on in the IC Engines field provides the latest developments in compression and spark ignition engines for light and heavy-duty applications, automotive and other markets

**Who's Who in Research: Cultural Studies** - Intellect Books 2013-01-01

Increasingly, academic communities transcend national boundaries. 'Collaboration between researchers across space is clearly increasing, as well as being increasingly sought after,' noted the online magazine Inside Higher Ed in a recent article about research in the social sciences and humanities. Even for those scholars who don't work directly with international colleagues, staying up-to-date and relevant requires keeping up with international currents of thought in one's field. But when one's colleagues span the globe, it's not always easy to keep track of who's who - or what kind of research they're conducting. That's where Intellect's new series comes in. A set of worldwide guides to leading academics - and their work - across the arts and humanities, *Who's Who in Research* features comprehensive profiles of scholars in the areas of cultural studies, film studies, media studies, performing arts and visual arts. *Who's Who in Research: Visual Arts* includes concise yet detailed listings include each academic's name, institution, biography, and current research interests, as well as bibliographic information and a list of articles published in Intellect journals. The volumes in the *Who's Who in Research* series will be updated each year, providing the most current information on the foremost thinkers in academia and making them an invaluable resource for scholars, hiring committees, academic libraries and would-be collaborators across the arts and humanities.

**Robust Control of Time-delay Systems** - Qing-Chang Zhong 2006-05-28

Recently, there have been significant developments in robust control of time-delay systems. This volume presents a systematic treatment of robust control for such systems in the frequency domain. The emphasis

is on systems with a single input or output delay, although the delay-free part of the plant can be multi-input-multi-output, in which case the delays in different channels should be the same. The author covers the whole range of H-infinity control of time-delay systems: from controller parameterization implementation; from the Nehari problem to the four-block problem; from theoretical developments to practical issues. The major tools used are similarity transformation, the chain-scattering approach and J-spectral factorization. Self-contained, "Robust Control of Time-delay Systems" will interest control theorists and mathematicians working with time-delay systems. Its methodical approach will be of value to graduates studying general robust control theory or its applications in time-delay systems.

*Education and the Politics of Becoming* - Diana Masny 2020-10-29

This collection examines education in the light of a politics of becoming. It takes a non-hierarchical transdisciplinary approach, challenging the macropolitics of pre-established governmental and economic agendas for education. Drawing on the philosophy of Gilles Deleuze and Felix Guattari, the contributors consider questions such as how education might engage a politics of becoming, and how education and becoming function in a society of control. Since Deleuze and Guattari contend that a society is defined by its becomings, its transformations, this collection asks how education, itself a process in becoming, may contribute "collective creations" to a society in continual flux. The chapters bring theory and praxis together, deploying power, affect, cartography, space, relationality, assemblage and multiple literacies in order to experiment with music, art, language, teacher education, curriculum and policy studies. This collection is an innovative resource, creating an encounter with the macropolitics of education, and altering teaching, learning, evaluation and curriculum. This book was originally published as a special issue of *Discourse: Studies in the Cultural Politics of Education*.

**DeFi and the Future of Finance** - Campbell R. Harvey 2021-08-24

During the Global Financial Crisis in 2008, our financial infrastructure failed. Governments bailed out the very institutions that let the economy down. This episode spurred a serious rethink of our financial system. Does it make any sense that it takes two days to settle a stock transaction? Why do retailers, operating on razor thin margins, have to pay 3% for every customer credit card swipe? Why does it take two days to transfer money from a bank account to a brokerage—or any other company? Why are savings rates miniscule or negative? Why is it so difficult for entrepreneurs to get financing at traditional banks? In *DeFi and the Future of Finance*, Campbell R. Harvey, Ashwin Ramachandran and Joey Santoro, introduce the new world of Decentralized Finance. The book argues that the current financial landscape is ripe for disruption and we are seeing, in real time, the reinvention of finance. The authors provide the reader with a clear assessment of the problems with the current financial system and how DeFi solves many of these problems. The essence of DeFi is that we interact with peers—there is no brick and mortar and all of the associated costs. Savings and lending are reinvented. Trading takes place with algorithms far removed from traditional brokerages. The book conducts a deep dive on some of the most innovative protocols such as Uniswap and Compound. Many of the companies featured in the book you might not have heard of—however, you will in the future. As with any new technology, there are a myriad of risks and the authors carefully catalogue these risks and assess which ones can be successfully mitigated. Ideally suited for people working in any part of the finance industry as well as financial policy makers, *DeFi and the Future of Finance* gives readers a vision of the future. The world of finance will fundamentally be changed over the coming decade. The book enables you to become part of the disruption – not the target of the disruption.

[Practical Methods for Analysis and Design of HV Installation Grounding Systems](#) - Ljubivoje M. Popovic

2018-02-20

*Practical Methods for Analysis and Design of HV Installation Grounding Systems* gives readers a basic understanding of the modeling characteristics of the major components of a complex grounding system. One by one, the author develops and analyzes each component as a standalone element, but then puts them together, considering their mutual disposition, or so-called proximity effect. This is the first book to enable the making and analysis of the most complex grounding systems that are typical for HV substations located in urban areas that uses relatively simple mathematical operations instead of modern computers. Since the presented methods enable problem-solving for more complex issues than the ones solved using National, IEC and/or IEEE standards, this book can be considered as an appendix to these standards. Develops general equations of lumped parameter ladder circuits Includes the analytical expression for determination of ground fault current distribution for a fault anywhere along a cable line Presents measurement and analytical methods for the determination of actual ground fault current distribution for high-voltage substations located in urban areas Provides the analytical procedure for the determination of the critical ground fault position for faults appearing in outgoing transmission lines Defines testing procedure for the correct evaluation of grounding systems of substations located in urban areas

*The Future of Money* - Eswar S. Prasad 2021-09-28

A cutting-edge look at how accelerating financial change, from the end of cash to the rise of cryptocurrencies, will transform economies for better and worse. We think we've seen financial innovation. We bank from laptops and buy coffee with the wave of a phone. But these are minor miracles compared with the dizzying experiments now underway around the globe, as businesses and governments alike embrace the possibilities of new financial technologies. As Eswar Prasad explains, the world of finance is at the threshold of major disruption that will affect corporations, bankers, states, and indeed all of us. The transformation of money will fundamentally rewrite how ordinary people live. Above all, Prasad foresees the end of physical cash. The driving force won't be phones or credit cards but rather central banks, spurred by the emergence of cryptocurrencies to develop their own, more stable digital currencies. Meanwhile, cryptocurrencies themselves will evolve unpredictably as global corporations like Facebook and Amazon join the game. The changes will be accompanied by snowballing innovations that are reshaping finance and have already begun to revolutionize how we invest, trade, insure, and manage risk. Prasad shows how these and other changes will redefine the very concept of money, unbundling its traditional functions as a unit of account, medium of exchange, and store of value. The promise lies in greater efficiency and flexibility, increased sensitivity to the needs of diverse consumers, and improved market access for the unbanked. The risk is instability, lack of accountability, and erosion of privacy. A lucid, visionary work, *The Future of Money* shows how to maximize the best and guard against the worst of what is to come.

**Communities of Fate** - Charles E. Marske 1991

Risk is always present; only the probabilities of risk vary. *Communities of Fate* offers an opportunity to deepen our understanding of the social origins and organization of risk. By emphasizing the social aspects of risk and illustrating the range of circumstances in which risk is not only socially defined but socially created, the author helps demonstrate the extent to which reducing risk is not a technical problem, but, within Habermas' framework, a practical one. In short, how do we encourage all people, including those predisposed to technical solutions, to appreciate the extent to which risk is socially constructed and, thus, to join the socio-political struggle to reduce it where that is possible? Contents: Introduction; Theoretical Frameworks-The Classical Statements; Theoretical Frameworks-The Contemporary Statements; Empirical Case Studies of Risk; Policy Implications.
