RightStart Mathematics is a comprehensive math program for children that is easy to teach and provides the foundation for everyday life, for advanced math, and for science in our technological world. The research-based elementary and intermediate RightStart

Mathematics program is easy to use: the lessons tell you what to teach, and how and why, day by day and year by year. This unique program uses visualization of quantities, de-emphasizes counting, and provides visual strategies (mental pictures) for memorizing the facts. Understanding is emphasized. Math needs to be

taught so 95 percent is understood and only 5 percent memorized. When children don't understand, they memorize until the burden becomes too great and then they give up. When children understand, they need less time in review and practice.

Coming of age has been a playful and intriguing experience for Jeremy Wilcamp and Stevie Stockton. Even within the confines of a rigid educational system, Jeremy and Stevie are having fun. But their happy advance into adolescence is about to be halted when they are confronted by bullies. One day is going to change everything when six kids scheme to bully, molest and humiliate these two best friends. Jeremy and Stevie are fourteen-year-old,

eighth grade students at a Catholic grammar school in 1958. They have very different family dynamics. Steve's parents cherish him, while Jeremy's mother resents him because he wasn't the daughter she always wanted. When Brad Maddox, the class bully, picks on Jeremy and taunts him in the boy's bathroom at school, Steve jumps to Jeremy's defense and gives Brad the beating of his life in front of half the boys in the class. Now, Steve and Jeremy are facing an avalanche of problems. Sister Sulpicia, the school principal, is all over them about the fight and threatening to intervene in Jeremy's family where she senses conflict between Jeremy and his parents. Brad and five of his high school buddies are going to gang up on Steve and Jeremy at an upcoming initiation event. This is a heartwarming and heartrending tale in which the quiet complacency of every character with their lives and their beliefs is going to be shattered by an unstoppable progression of events.

Talent Is Overrated - Geoff Colvin 2011-01-11
What if everything you know about raw talent, hard work, and great performance is wrong? Few, if any, of the people around you are truly great at what they do. But why aren't they? Why don't they manage businesses like Jack Welch or Andy Grove, play golf like Tiger Woods or play the violin like Itzhak Perlman? Asked to explain why a few people truly excel, most of us offer one of two answers: hard work or a natural talent. However, scientific evidence doesn't support the notion that specific natural talents make great performers. In one of the most

popular Fortune articles in years, Geoff Colvin offered new evidence that top performers in any field - from Tiger Woods and Winston Churchill to Warren Buffett and Jack Welch - are not determined by their inborn talents. Greatness doesn't come from DNA but from practice and perseverance honed over decades. And not just plain old hard work, but a very specific kind of work. The key is how you practice, how you analyze the results of your progress and learn from your mistakes, that enables you to achieve greatness. Now Colvin has expanded his article with much more scientific background and real-life examples. He shows that the skills of business - negotiating deals, evaluating financial statements, and all the rest - obey the principles that lead to greatness, so that anyone can get better at them with the right kind of effort. Even the hardest decisions and interactions can be systematically improved. This new mind-set, combined with Colvin's practical advice, will change the way you think about your job and

career - and will inspire you to achieve more in all you do.
