Dr. Bach made a detailed study of bacteriology, immunology and homeopathy and found a clear connection between chronic disease and negative mental attitudes. It was the relationship between mind and body which formed the basis of his further research and as he became increasingly convinced that emotional harmony was the key to good health, he was determined to find a simple, non-invasive and harmless method of healing which could be used safely by everyone. And it answers such questions as: "Are 'organic' foods worth their extra cost?" "Can acupuncture cure anything?" "Will vitamin B₁₂ shots pep me up?" "Can diet cure arthritis?" "Will spinal adjustments help my health?" "Will amino acids 'pump up' my muscles?" "Where can reliable information be obtained?" and "What's the best way to get good medical care?" Even if the answers to some of these questions seem obvious, the details in this volume, written in an informative, highly readable, and easy-to-understand style, will astound you. Why Air Forces Fail - Robin Higham 2006-02-17

According to Robin Higham and Stephen J. Harris, "Flight has been part of the human dream for aeons, and its military application has likely been the dark side of that dream for almost as long." In the twentieth century, this dream and its dark side unfolded as the air forces of the world went to war, bringing destruction and reassessment with each failure. Why Air Forces Fail examines the complex, often deep-seated, reasons for the catastrophic failures of the air forces of various nations. Higham and Harris divide the air forces into three categories of defeat: forces that never had a chance to win, such as Poland and France; forces that started out victorious but were ultimately defeated, such as Germany and Japan; and finally, those that were defeated in their early efforts yet rose to victory, such as the air forces of Britain and the United States. The contributing authors examine the complex causes of defeats of the Russian, Polish, French, British, Italian, German, Argentine, and American air services. In all cases, the failures stemmed from deep, usually prewar factors that were shaped by the political, economic, military, and social circumstances in the countries. Defeat also stemmed from the anticipation of future wars, early wartime actions, and the precarious relationship between the doctrine of the military leadership and its execution in the field. Anthony Christopher Cain's chapter on France's air force, l'Armée de l'Air, attributes France's loss to Germany in June 1940 to a lack of preparation and investment in the air force. One major problem was the failure to centralize planning or coordinate a strategy between land and air forces, which was compounded by aborted alliances between France and countries in eastern Europe, especially Poland and Czechoslovakia. In addition, the lack of incentives for design innovation in air technologies led to clashes between airplane manufacturers, laborers, and the government, a struggle that resulted in France's airplanes' being outnumbered by Germany's more than three to one by 1940. Complemented by reading lists and suggestions for further research, Why Air Forces Fail provides groundbreaking studies of the causes of air force defeats.
