Macroeconomic Policy in Open Economies - Michele Fratianni 1997

Focusing on the international dimension of macroeconomic policy, this handbook covers the main areas of modern macroeconomic policy in open economies. The emphasis is on policy applications rather than the development of economic theory. There are three basic goals: (1) an understanding of how economic theories affect actual policy making, (2) a description of the institutional and conceptual development of the international economy, and (3) an explanation of the way policy-making institutions deal with the so-called international economy. The handbook consists of an introductory chapter and four parts. The first treats macroeconomic policy-making from the home country versus the rest of the world perspective. The second part stresses policies among interacting and reacting countries. The third part considers the development of world capital markets and the international monetary system as important parts of the policy environment. The final part details macroeconomic policies in the G7 and Latin American countries.

The contributors are theorists, researchers, and advisors to governments and international organizations who are at the forefront of trade theory, policy, and practice, and whose analyses have a real impact on international trade. Research and Profit Maximization in Finance and Economics - Christopher E. S. Warburton 2006

Institutional profit realization has become highly contingent on research

education, investment, and planning; yet, the methodology of research may not be clear to young researchers or students of Economics and Management Science. In *Research and Profit Maximization in Finance and Economics*, author Christopher Warburton breaks the methodology of research into three component parts: the essence of research; avenues from which data on economic indicators could be obtained; and the estimation of assorted models for forecasting economic indicators to maximize profit. The central concept of profit maximization is presented to incorporate the optimization problem in Economics. The substitution, Lagrangean, graphing, and linear programming methods of optimization are fully explained. Data and model discussions include practical examples of stationary and non-stationary data, as well as univariate, multivariate, and atheoretic (Box-Jenkins) regression models. *Research and Profit Maximization in Finance and Economics* is a concise presentation to meet notable challenges in academic and business research, which involve data collection, basic data estimation, forecasting, and profit maximization.

Finance Markets, the New Economy and Growth - Luigi Paganetto 2017-11-30

The existence of significant differences in the organization of the US and European financial markets prompts a number of important questions. Firstly, is it possible to determine the type of institutions that are more conducive to growth? Secondly, did the financial markets play a key role in securing the growth and prosperity of the US during the 1990s? A third issue is the effect of the recent changes in the organization of the financial markets. The last issue addressed relates to the effects on investment and growth of the different corporate governance structures that prevail in the various countries. By exploring the differences between the financial markets in the US and Europe this book helps the reader assess the role of financial markets in securing investment and growth.

The Coming Economic Armageddon - David Jeremiah 2010-10-01
Never before have we read such jarring headlines, distressing news

analyses, or dire predictions concerning the world's financial future. The American housing market -- or, more sentimentally, the American dream -- began to collapse in 2006, taking with it large chunks of the global financial system. Millions of jobs worldwide have vanished forever. Did Bible prophecy predict this catastrophe? Are there biblical clues to how soon, if ever, a viable, long-term recovery can be sustained? Is the financial collapse just one of several signs that we are living in the final days of Earth's history In *THE COMING ECONOMIC ARMAGEDDON*, David Jeremiah says we can know the meaning behind what we see in the daily news -- and understand and prepare for living in the New Global Economy.
