Strategies to Improve Cardiac Arrest Survival -

Institute of Medicine
2015-09-29

Cardiac arrest can strike a seemingly healthy individual of any age, race, ethnicity, or gender at any time in any location, often without warning. Cardiac arrest is the third leading cause of death in the United States, following cancer and heart disease. Four out of five cardiac arrests occur in the home, and more than 90 percent of individuals with cardiac arrest die before reaching the hospital. First and foremost, cardiac arrest treatment is a community issue - local resources and personnel must provide appropriate, high-quality care to save the life of a community member. Time between onset of arrest and provision of care is fundamental, and shortening this time is one of the best ways to reduce the risk of death and disability from

cardiac arrest. Specific actions can be implemented now to decrease this time, and recent advances in science could lead to new discoveries in the causes of, and treatments for, cardiac arrest. However, specific barriers must first be addressed. Strategies to Improve Cardiac Arrest Survival examines the complete system of response to cardiac arrest in the United States and identifies opportunities within existing and new treatments, strategies, and research that promise to improve the survival and recovery of patients. The recommendations of Strategies to Improve Cardiac Arrest Survival provide high-priority actions to advance the field as a whole. This report will help citizens, government agencies, and private industry to improve health outcomes from sudden cardiac arrest across the United States.

A Practical Guide to Trade Policy Analysis - Marc

Bacchetta 2012

Trade flows and trade policies need to be properly quantified to describe, compare, or follow the evolution of policies between sectors or countries or over time. This is essential to ensure that policy choices are made with an appropriate knowledge of the real conditions. This practical guide introduces the main techniques of trade and trade policy data analysis. It shows how to develop the main indexes used to analyze trade flows, tariff structures, and non-tariff measures. It presents the databases needed to construct these indexes as well as the challenges faced in collecting and processing these data, such as measurement errors or aggregation bias. Written by experts with practical experience in the field, A Practical Guide to Trade Policy Analysis has been developed to contribute to enhance developing countries' capacity

to analyze and implement trade policy. It offers a hands-on introduction on how to estimate the distributional effects of trade policies on welfare, in particular on inequality and poverty. The guide is aimed at government experts engaged in trade negotiations, as well as students and researchers involved in trade-related study or research. An accompanying DVD contains data sets and program command files required for the exercises. Copublished by the WTO and the United Nations Conference on Trade and Development [ICD-10-CM Official Guidelines for Coding and Reporting - FY 2021 \(October 1, 2020 - September 30, 2021\)](#) - Department Of Health And Human Services 2020-09-06 These guidelines have been approved by the four organizations that make up the Cooperating Parties for the ICD-10-CM: the American Hospital Association (AHA), the American Health Information Management Association (AHIMA), CMS, and NCHS.

These guidelines are a set of rules that have been developed to accompany and complement the official conventions and instructions provided within the ICD-10-CM itself. The instructions and conventions of the classification take precedence over guidelines. These guidelines are based on the coding and sequencing instructions in the Tabular List and Alphabetic Index of ICD-10-CM, but provide additional instruction. Adherence to these guidelines when assigning ICD-10-CM diagnosis codes is required under the Health Insurance Portability and Accountability Act (HIPAA). The diagnosis codes (Tabular List and Alphabetic Index) have been adopted under HIPAA for all healthcare settings. A joint effort between the healthcare provider and the coder is essential to achieve complete and accurate documentation, code assignment, and reporting of diagnoses and procedures. These guidelines have been developed to assist both the healthcare provider and the

coder in identifying those diagnoses that are to be reported. The importance of consistent, complete documentation in the medical record cannot be overemphasized. Without such documentation accurate coding cannot be achieved. The entire record should be reviewed to determine the specific reason for the encounter and the conditions treated.

Mohs Micrographic Surgery -

Stephen N. Snow 2004
Mohs Micrographic Surgery, an advanced treatment procedure for skin cancer, offers the highest potential for recovery—even if the skin cancer has been previously treated. This procedure is a state-of-the-art treatment in which the physician serves as surgeon, pathologist, and reconstructive surgeon. It relies on the accuracy of a microscope to trace and ensure removal of skin cancer down to its roots. This procedure allows dermatologists trained in Mohs Surgery to see beyond the visible disease and to precisely identify and remove the entire tumor, leaving healthy tissue unharmed. This procedure is most often used in treating two of the most common forms of skin cancer: basal cell carcinoma and squamous cell carcinoma. The cure rate for Mohs Micrographic Surgery is the highest of all treatments for skin cancer—up to 99 percent even if other forms of treatment have failed. This procedure, the most exact and precise method of tumor

removal, minimizes the chance of regrowth and lessens the potential for scarring or disfigurement

ICD-10-CM Experts for Hospitals (Spiral) with Guidelines 2022 - 2021-10

Ghana National Health Insurance Scheme - Huihui Wang 2017-08-14

Ghana National Health Insurance Scheme (NHIS) was established in 2003 as a major vehicle to achieve the country's commitment of Universal Health Coverage. The government has earmarked value-added tax to finance NHIS in addition to deduction from Social Security Trust (SSNIT) and premium payment. However, the scheme has been running under deficit since 2009 due to expansion of coverage, increase in service use, and surge in expenditure. Consequently, Ghana National Health Insurance Authority (NHIA) had to reduce

investment fund, borrow loans and delay claims reimbursement to providers in order to fill the gap. This study aimed to provide policy recommendations on how to improve efficiency and financial sustainability of NHIS based on health sector expenditure and NHIS claims expenditure review. The analysis started with an overall health sector expenditure review, zoomed into NHIS claims expenditure in Volta region as a miniature for the scheme, and followed by identification of factors affecting level and efficiency of expenditure. This study is the first attempt to undertake systematic in-depth analysis of NHIS claims expenditure. Based on the study findings, it is recommended that NHIS establish a stronger expenditure control system in place for long-term sustainability. The majority of NHIS claims expenditure is for outpatient consultations, district hospitals and above, certain member groups (e.g., informal group, members with

more than five visits in a year). These distribution patterns are closely related to NHIS design features that encourages expenditure surge. For example, year-round open registration boosted adverse selection during enrollment, essentially fee-for-service provider mechanisms incentivized oversupply but not better quality and cost-effectiveness, and zero patient cost-sharing by patients reduced prudence in seeking care and caused overuse. Moreover, NHIA is not equipped to control expenditure or monitor effect of cost-containment policies. The claims processing system is mostly manual and does not collect information on service delivery and results. No mechanisms exist to monitor and correct providers' abnormal behaviors, as well as engage NHIS members for and engaging members for information verification, case management and prevention.
