Brands - S. Hart 1997-11-14

Branding is currently one of the most exciting subjects around; business people everywhere are waking up to the fact that brands are a huge source of value. But it is only by understanding the real value that brands bring to consumers that brand owners and manufacturers can truly learn to exploit that value. Brands no longer operate only in the traditional packaged goods markets; the techniques of good branding are just as vital in the business-to-business and utilities sectors, and are increasingly being applied even in non-commercial areas, from charities to football clubs. This comprehensive and authoritative book looks at branding from a wide range of perspectives: from the creation of a new brand, through the development of brand names and packaging designs, to advertising

international brands. It explores the hot topics of brand valuation and brand licensing, as well as studying the increasingly important role of the corporate brand. This book is a must for anyone with an interest in brands.

Linear Algebra: A Modern Introduction - David Poole 2014-03-19

David Poole's innovative LINEAR ALGEBRA: A MODERN INTRODUCTION, 4e emphasizes a vectors approach and better prepares students to make the transition from computational to theoretical mathematics. Balancing theory and applications, the book is written in a conversational style and combines a traditional presentation with a focus on student-centered learning. Theoretical, computational, and applied topics are presented in a flexible yet integrated way. Stressing geometric understanding before computational techniques, vectors and vector geometry are introduced early to help students visualize concepts and develop mathematical maturity for abstract thinking. Additionally, the book includes ample applications drawn from a variety of disciplines, which reinforce the fact that linear algebra is a valuable tool for modeling real-life problems.
