...the relationship between employment growth and output growth...is greatly affected by the functioning, efficiency and institutional structure of the labor market. --Joseph Stiglitz, Chief Economist
Despite the resumption of economic growth in most LAC countries since the late 1980s, improvements on the employment/unemployment front have been sluggish at best, with a few notable exceptions. In many countries, renewed growth in LAC in the 1990s has so far failed to generate adequate new jobs in place of those lost during the adjustment, and to restore wages to pre-crisis levels. The focus

of this book is on: Â· the performance of labor markets in the LAC region since the beginning of significant structural reforms most countries in the region have undertaken Â· the structure of labor markets, institutions, and incentive structures; Â· the effects of that structure on employment, earnings, income distribution, and poverty levels; Â· the role of labor market institutions in labor market trends; Â· the options for reform and the benefits of comprehensive labor reforms, as evidenced inside and outside the region; Â· labor policy reforms to improve in a sustainable way the employment/unemployment outlook.

Internal Combustion Engines - Institution of Mechanical Engineers
2014-10-10

This book presents the papers from the Internal Combustion Engines: Performance, fuel economy and emissions held in London, UK. This popular international conference from the Institution of Mechanical Engineers provides a forum for IC engine experts looking closely at developments for personal transport applications, though many of the drivers of change apply to light and heavy duty, on and off highway, transport and other sectors. These are exciting times to be working in the IC engine field. With the move towards downsizing, advances in FIE and alternative fuels, new engine architectures and the introduction of Euro 6 in 2014, there are plenty of challenges. The aim remains to reduce both CO₂ emissions and the dependence on oil-

derivate fossil fuels whilst meeting the future, more stringent constraints on gaseous and particulate material emissions as set by EU, North American and Japanese regulations. How will technology developments enhance performance and shape the next generation of designs? The book introduces compression and internal combustion engines' applications, followed by chapters on the challenges faced by alternative fuels and fuel delivery. The remaining chapters explore current improvements in combustion, pollution prevention strategies and data comparisons. presents the latest requirements and challenges for personal transport applications gives an insight into the technical advances and research going on in the IC Engines field

provides the latest developments in compression and spark ignition engines for light and heavy-duty applications, automotive and other markets

David Vizard's How to Port and Flow Test Cylinder Heads - David Vizard 2012

Porting heads is an art and science. It takes a craftsman's touch to shape the surfaces of the head for the optimal flow characteristics and the best performance. Porting demands the right tools, skills, and application of knowledge. Few other engine builders have the same level of knowledge and skill porting engine heads as David Vizard. All the aspects of porting stock as well as

aftermarket heads in aluminum and cast-iron constructions are covered. Vizard goes into great depth and detail on porting aftermarket heads. Starting with the basic techniques up to more advanced techniques, you are shown how to port iron and aluminum heads as well as benefits of hand and CNC porting. You are also shown how to build a high-quality flow bench at home so you can test your work and obtain professional results. Vizard shows how to optimize flow paths through the heads, past the valves, and into the combustion chamber. The book covers blending the bowls, a basic porting procedure, and also covers pocket porting, porting the intake runners, and many advanced procedures. These advanced procedures include unshrouding valves,

porting a shortside turn from the floor of the port down toward the valve seat, and developing the ideal port area and angle. All of these changes combine to produce optimal flow velocity through the engine for maximum power.

As the days grow shorter, Seda is filled with dread. They're about to be cut off from the outside world, and she's not sure she can handle the solitude or the darkness it brings out in her. Then a group of teens get stranded near the mansion during a blizzard. Seda has no choice but to offer them shelter, even though she knows danger lurks in the dilapidated mansion—and in herself. And as the snow continues to fall, what Seda fears most is about to become her reality...

Chemistry & Physics of Carbon - Ljubisa R.

Radovic 2012-10-03

Written by distinguished researchers, the long-running Chemistry and

Physics of Carbon series provides a comprehensive and critical overview of carbon materials in terms of molecular structure, intermolecular relationships, bulk and surface properties, and their behavior in current and emerging applications. Volume 31 not only retains the high-quality content and reputation of previous volumes, but also complements them with reliable and timely coverage of the latest advances in the field. Maintaining the high level established by its predecessors, this book contains a prestigious and authoritative series of review chapters covering both chemistry and physics of carbon. The book examines properties and behavior of carbon materials ranging from coal to graphite, from activated carbons, chars, cokes,

and carbon blacks to carbon fibers, fullerenes, nanotubes, and graphene. It complements previous volumes in the series by presenting updated information on 'disordered' carbons, a complex field that impacts nearly all aspects of carbon materials research. It includes a chapter on novel methods of characterization of carbon materials using ever more powerful techniques, as well as a chapter on the use of carbon materials in photocatalysis, a fast-moving and potentially exciting application. Emphasizing key experimental results and practical aspects, as well as important theoretical issues in every chapter, Volume 31 is a vital resource for those engaged in developing new technologies in a wide

range of applicability of traditional and novel carbon materials from drug delivery to energy storage and conversion.

The Tradeoff Between Number of Children and Child Schooling - Mark Montgomery 1995
Annotation World Bank Living Standards Measurement Study No. 112. Assesses evidence of a negative correlation between the number of children born and levels of child schooling by examining their determinants. In many developing countries, as parents have fewer children, they invest more in the health, education, and welfare of each child. This "quantity-quality tradeoff" is vividly illustrated in the recent economic development of Southeast Asia and Latin America. In Sub-Saharan Africa, however, the existence of such a tradeoff has not been established. The few studies conducted to date reveal either no correlation or a slightly positive one,

whereby higher fertility rates are linked to greater schooling per child. This study examines the determinants of fertility and of child schooling in Côte d'Ivoire and Ghana to assess evidence of a tradeoff, using data from three surveys conducted between 1985 and 1987. The results are mixed. In Côte d'Ivoire, there is evidence of such a tradeoff in urban areas but not rural ones. In urban areas, female schooling, higher

income, and improved child survival are associated with lower fertility and higher child schooling. In both rural and urban areas of Ghana, there is a tradeoff between fertility and child schooling with higher incomes, and, in rural Ghana, with increases in mothers' schooling. Also available in French ("La relation entre le nombre des enfants et de la scolarisation: Le cas de la Côte d'Ivoire et du Ghana"): (ISBN 0-8213-3374-7) Stock No. 13374.
