Keeping Patients Safe - Institute of Medicine 2004-03-27
Building on the revolutionary Institute of Medicine reports *To Err is Human* and *Crossing the Quality Chasm*, *Keeping Patients Safe* lays out guidelines for improving patient safety by changing nurses' working conditions and demands. Licensed nurses and unlicensed nursing assistants are critical participants in our national effort to protect patients from health care errors. The nature of the activities nurses typically perform " monitoring patients, educating home caretakers, performing treatments, and rescuing patients who are in crisis " provides an indispensable resource in detecting and remedying error-producing defects in the U.S. health care system. During the past two decades, substantial changes have been made in the organization

and delivery of health care " and consequently in the job description and work environment of nurses. As patients are increasingly cared for as outpatients, nurses in hospitals and nursing homes deal with greater severity of illness. Problems in management practices, employee deployment, work and workspace design, and the basic safety culture of health care organizations place patients at further risk. This newest edition in the groundbreaking Institute of Medicine Quality Chasm series discusses the key aspects of the work environment for nurses and reviews the potential improvements in working conditions that are likely to have an impact on patient safety.

Nursing Mnemonics - Gerald Paul Clifford 2020-10-27

Are you studying to become a nurse? Are you planning to take the NCLEX exam? Are you finding it difficult to remember all of the facts and specific medical information required of you for this position? If you answered yes to any of these questions, then this is the book for you. Inside you will find: -Information on the proven memory aid of mnemonics, including how they work so that you can even make up your own. ✓ Hundreds of medical mnemonics cover many different topics that will help you remember the facts for exams and your daily work as a nurse. ✓ Information on the NCLEX exam, including what to expect and how to study for this important exam. ✓ 100 practice questions and answers in the same format that you will find on the NCLEX exam to know exactly what to expect. -Do you know off the top of your head when you should be concerned about a patient's mole? If you remember the mnemonic ABCDE, then it will be easy! -A = Asymmetry- B = Border irregular- C = Color irregular- D = Diameter usually greater than 0.5 cm- E = Elevation irregular What if you are looking at an x-ray and notice something weird that shouldn't be there. If you see HOLES in the chest, that is WEIRD. What are the possible differentials? -W = Wegner's syndrome- E = Embolic (pulmonary, septic)- I = Infection (anaerobes, pneumocystis, TB)- R = Rheumatoid (Necrobiotic nodules)- D = Developmental cysts (sequestration)- H = Histiocytosis- O = Oncological- L = Lymphangiomyomatosis- E = Environmental/ occupational- S = Sarcoid. Like in these examples, mnemonics are a proven way to help you recall specific information, including detailed information such as differentials, symptoms, diagnostics, and even steps in a procedure. Throughout this book, you will find hundreds of mnemonics, many of which have been used for years by health care professionals to help them recall vital information. Once you see how the mnemonics work, you can pick and choose the ones that work for you, or you can even use the information in this book to create your own mnemonics that are easy for you to remember. Mnemonics can also come in handy on the NCLEX. Here is a question that is typical for this exam: A patient comes to the clinic complaining of severe gastrointestinal distress. Which abdominal physical assessment step does the nurse do first? a. Inspection b. Palpation c. Percussion d. Auscultation. If you remember your mnemonic tricks, then this question will be easy. Remember the mnemonic "I Am a People Person," and you will instantly know that the answer is "A, inspection." -I = Inspection- A = Auscultation- P = Percussion- P = Palpation. Please don't wait until you are studying for exams, pick up this book, and use it throughout your studies so that the mnemonics used will become second nature to you and propel you towards your nursing career.

Joan Garry's Guide to Nonprofit Leadership - Joan Garry 2017-02-28

Nonprofit leadership is messy Nonprofits leaders are optimistic by nature. They believe with time, energy, smarts, strategy and sheer will, they can change the world. But as staff or board leader, you know nonprofits present unique challenges. Too many cooks, not enough money, an abundance of passion. It's enough to make you

feel overwhelmed and alone. The people you help need you to be successful. But there are so many obstacles: a micromanaging board that doesn't understand its true role; insufficient fundraising and donors who make unreasonable demands; unclear and inconsistent messaging and marketing; a leader who's a star in her sector but a difficult boss... And yet, many nonprofits do thrive. Joan Garry's *Guide to Nonprofit Leadership* will show you how to do just that. Funny, honest, intensely actionable, and based on her decades of experience, this is the book Joan Garry wishes she had when she led GLAAD out of a financial crisis in 1997. Joan will teach you how to: Build a powerhouse board Create an impressive and sustainable fundraising program Become seen as a 'workplace of choice' Be a compelling public face of your nonprofit This book will renew your passion for your mission and organization, and help you make a bigger difference in the world.

Health Professions Education - Institute of Medicine 2003-07-01

The Institute of Medicine study *Crossing the Quality Chasm* (2001) recommended that an interdisciplinary summit be held to further reform of health professions education in order to enhance quality and patient safety. *Health Professions Education: A Bridge to Quality* is the follow up to that summit, held in June 2002, where 150 participants across disciplines and occupations developed ideas about how to integrate a core set of competencies into health professions education. These core competencies include patient-centered care, interdisciplinary teams, evidence-based practice, quality improvement, and informatics. This book recommends a mix of approaches to health education improvement, including those related to oversight processes, the training environment, research, public reporting, and leadership. Educators, administrators, and health professionals can use this book to help achieve an approach to education that better prepares clinicians to meet both the needs of patients and the requirements of a changing health care system.

Registries for Evaluating Patient Outcomes - Agency for Healthcare Research and Quality/AHRQ 2014-04-01

This User's Guide is intended to support the design, implementation, analysis, interpretation, and quality evaluation of registries created to increase understanding of patient outcomes. For the purposes of this guide, a patient registry is an organized system that uses observational study methods to collect uniform data (clinical and other) to evaluate specified outcomes for a population defined by a particular disease, condition, or exposure, and that serves one or more predetermined scientific, clinical, or policy purposes. A registry database is a file (or files) derived from the registry. Although registries can serve many purposes, this guide focuses on registries created for one or more of the following purposes: to describe the natural history of disease, to determine clinical effectiveness or cost-effectiveness of health care products and services, to measure or monitor safety and harm, and/or to measure quality of care. Registries are classified according to how their populations are defined. For example, product registries include patients who have been exposed to biopharmaceutical products or medical devices. Health services registries consist of patients who have had a common procedure, clinical encounter, or hospitalization. Disease or condition registries are defined by patients having the same diagnosis, such as cystic fibrosis or heart

failure. The User's Guide was created by researchers affiliated with AHRQ's Effective Health Care Program, particularly those who participated in AHRQ's DEcIDE (Developing Evidence to Inform Decisions About Effectiveness) program. Chapters were subject to multiple internal and external independent reviews. *ABG Interpretation for Nurses* - Nurse Edu 2020-08-29

ECSCW 2009: Proceedings of the 11th European Conference on Computer Supported Cooperative Work, 7-11 September 2009, Vienna, Austria - Ina Wagner 2009-08-19

This volume presents the proceedings of ECSCW'09, the 11th European Conference on Computer Supported Cooperative Work. Each conference offers an occasion to critically review our research field, which has been multidisciplinary and committed to high scientific standards, both theoretical and methodological, from its beginning. These proceedings represent discussions and contributions to ongoing challenges. One challenge comes from emerging new technologies connected to 'social computing', gaming, as well as applications supporting citizen participation in their communities. As boundaries between home and work erode with the increased movement of work into home environments, and new applications further blur the once separate conceptions of work and leisure, our intellectual community faces challenges in the ways we think about and study work. Other challenges result from transformations of the world of work itself and the role of IT in these. They have been taken up in in-depth studies of design practice, software development, and manufacturing, as well as in the growing body of research on health care contexts and applications. Finally, there is the question of what is the European perspective in our community and whether it is worthwhile to anchor our research more firmly in such a perspective. Of high relevance to our field is the strong grounding of technology development in an understanding of human activity. The nineteen full papers, four short papers and one discussion paper selected for this conference deal with and reflect on some of these challenges, thus representing the lively debate currently ongoing in our field of research.
