Polemic in the Book of Hebrews - Lloyd Kim
2006-11-01

The author of Hebrews is arguing that God himself has brought about the fulfillment of these institutions through his Son's priesthood, his once-for-all sacrifice, and the new covenant he inaugurated in the last days. These new institutions are never denied the Jews. In fact, the context of the epistle presumes that these are primarily for the Jews, considering that the author was speaking to a Jewish-Christian community. The author is not arguing for the abandonment by God of the Jewish people, but rather for the abandonment of the shadowy means by which God's people drew near to him. It is here we can speak of a qualified supersessionism. According to the author of Hebrews, the Levitical priesthood, the Mosaic covenant, and the Levitical sacrifices have been superseded by Jesus' priesthood, the new covenant, and Jesus' once-for-all sacrifice. However, we conclude that the polemical passages in Hebrews do not promote hatred of the Jews, nor do they advocate the destruction of the Jewish people. Rather, the author of Hebrews stresses the fulfillment of specific Jewish institutions for the benefit of the Jews. It is this idea of fulfillment that rules out the charge that the epistle promotes the supercession of the Jewish people. Because of God's great love for his people, he has provided a superior

way by which his people can draw near to him. --
from the Conclusion

QoS in Integrated 3G Networks - Robert Lloyd-Evans 2002

Water Quality Criteria for Freshwater Fish - J S Alabaster 2013-10-22

Water Quality Criteria for Freshwater Fish, Second Edition, is a collection of 12 technical papers on water quality criteria for European freshwater fish, together with a report on fish toxicity testing procedures that have been produced for the European Inland Fisheries Advisory Commission

(EIFAC)—an intergovernmental organization with a current membership of 24 countries. Each chapter reviews a particular water quality characteristic for European inland fisheries, although the effects of mixtures with other harmful substances have been described for some of them. These characteristics include water quality criteria for finely suspended solids and pH values; water temperature; the effect of ammonia; phenolic wastes; dissolved oxygen; chemistry and toxicology of chlorine; and toxicity of zinc, copper, and cadmium. The reports in this volume will be useful not only to the member countries of the European Inland Fisheries Advisory Commission, but also to those concerned with the management of inland waters and their fishery resources in other continents.

Principles and Practices in Ancient Greek and Chinese Science - Geoffrey Ernest Richard Lloyd 2006

Professor Lloyd has chosen fifteen of his most important and influential articles from the last two decades to be reprinted in this collection. They tackle a wide range of problems in ancient Greek and Chinese thought, focussing especially on science but including also medicine, mathematics, philosophy and mythology. Alongside papers that deal with technical issues in the interpretation of our sources, others raise strategic questions to do with the institutional framework of ancient science, the role of literacy in its development, and the underlying ontological and epistemological presuppositions of different groups of ancient investigators. Two of the articles appear here for the first time in English.

Frank Lloyd Wright's Living Space - Gail Satler 1999

-- "The space within the building is the reality of that building." So says Frank Lloyd Wright in "The Destruction of the Box," an address in which he recalls for his audience the origins of his break with

previous architectural thought. According to Satler, Wright's approach, "organic architecture," reveals space as a lived and living entity, one that achieves its full meaning only when it becomes inscribed with the actual practices of those who inhabit it. This sociological analysis of Wright's architecture examines the interaction between people and the spaces they create. Satler shows how Wright explored a new architectural dimension, the space in which we live. Focusing on the Larkin Building (1904) and Unity Temple (1907), works that Wright considered important but that have received little attention, Satler delineates the social nature of space. She provides an analytic framework through which to understand Wright's building and his writings, revealing how the history of such works and cultural landscapes offers a basis for making social, political, and spatial choices about the future. Wright's specific architectural works provide a framework for constructing social histories of places and people because his design represents a natural way to build and to live within a larger social landscape. This original study will appeal to sociologists, architects, urban and architectural historians, urban planners and anthropologists, and those interested in the work of Frank Lloyd Wright.

Programming the Universe - Seth Lloyd

2007-03-13

Is the universe actually a giant quantum computer? According to Seth Lloyd, the answer is yes. All

interactions between particles in the universe, Lloyd explains, convey not only energy but also information—in other words, particles not only collide, they compute. What is the entire universe computing, ultimately? “Its own dynamical evolution,” he says. “As the computation proceeds, reality unfolds.” *Programming the Universe*, a wonderfully accessible book, presents an original and compelling vision of reality, revealing our world in an entirely new light.
