Medical Imaging - Anthony B. Wolbarst 2013-04-02

"An excellent primer on medical imaging for all members of the medical profession . . . including non-radiological specialists. It is technically solid and filled with diagrams and clinical images illustrating important points, but it is also easily readable . . . So many outstanding chapters . . . The book uses little mathematics beyond simple algebra [and] presents complex ideas in very understandable terms." -Melvin E. Clouse, MD, Vice Chairman Emeritus, Department of Radiology, Beth Israel Deaconess Medical Center and Deaconess Professor of Radiology, Harvard Medical School A well-known medical physicist and author, an interventional radiologist, and an emergency room physician with no special training in radiology have collaborated to write, in the language familiar to physicians, an introduction to the technology and clinical applications of medical imaging. It is intentionally brief and not overly detailed, intended to help clinicians with very little free time rapidly gain enough command of the critically important imaging tools of their trade to be able to discuss them confidently with medical and technical colleagues; to explain the general ideas accurately to students, nurses, and technologists; and to describe them effectively to concerned patients and loved ones. Chapter coverage includes: Introduction: Dr. Doe's Headaches Sketches of the Standard Imaging Modalities Image Quality and Dose Creating Subject Contrast in the Primary X-Ray Image Twentieth-Century (Analog) Radiography and Fluoroscopy Radiation Dose and Radiogenic Cancer Risk Twenty-First-Century (Digital) Imaging Digital Planar Imaging Computed Tomography Nuclear Medicine (Including SPECT and PET) Diagnostic Ultrasound (Including Doppler) MRI in One Dimension and with No Relaxation Mapping T1 and T2 Proton Spin Relaxation in 3D Evolving and Experimental Modalities

Contemporary Research on Intertextuality in Video Games

- Duret, Christophe 2016-06-16

Culture is dependent upon intertextuality to fuel the consumption and production of new media. The notion of intertextuality has gone through many iterations, but what remains constant is its stalwart application to bring to light what audiences value through the marriages of disparate ideology and references. Videogames, in particular, have a longstanding tradition of weaving texts together in multimedia formats that interact directly with players. Contemporary Research on Intertextuality in Video Games brings together game scholars to analyze the impact of video games through the lenses of transmediality, intermediality, hypertextuality, architextuality, and paratextuality. Unique in its endeavor, this publication discusses the vast web of interconnected texts that feed into digital games and their players. This book is essential reading for game theorists, designers, sociologists, and researchers in the fields of communication sciences, literature, and media studies.

The 232 papers are themed under 6 section headings: biomedical data, tools and methods; supporting care delivery; health and prevention; precision medicine and public health; human factors and citizen centered digital health; and ethics, legal and societal aspects. A 7th section deals with the Swiss personalized health network, and section 8 includes the 125 posters accepted for the conference. María Magdalena Campos-Pons - Maria Magdalena Campos-Pons 2007

A stunning mid-career retrospective of an important and influential contemporary Afro-Cuban artist With a diverse oeuvre ranging from painting to mixed-media installations to performance, video, and photography, María Magdalena Campos-Pons is one of the most significant artists to emerge from post-Revolutionary Cuba. Her evocative works probe questions of race, class, cultural hybridism, and national identities in African diasporic communities. *María Magdalena Campos-Pons: Everything Is Separated by Water* is the first full-scale survey of the artist's career. The title, borrowed from one of her works, evokes at once the dangerous sea crossings faced by her enslaved ancestors from Africa and her Cuban contemporaries seeking greater freedom in America, and the sense of dislocation felt when physical and geopolitical barriers divide family and friends, past and future. Lisa D. Freiman considers how Campos-Pons's practice, which is predicated on concepts of separation, memory, and fragmentation, developed and transformed from her artistic training and early production in Cuba in the 1980s through her move to the United States in 1991 and her subsequent recognition as a major figure in the international art world. Okwui Enwezor interprets Campos-Pons's expressive materials--reassembled fragments of lost traditions and symbols, and memories of personal and collective history, religion, and mythology--within the context of post-colonial theory. Handsomely designed and produced, this book offers an unprecedented opportunity to assess the significance and import of this challenging artist's work. Published in association with the Indianapolis Museum of Art Exhibition Schedule: Indianapolis Museum of Art (February 25 - June 3, 2007) Bass Museum of Art, Miami Beach (September 21 - November 12, 2007)

MEDINFO 2021: One World, One Health - Global Partnership for Digital Innovation - P. Otero 2022-08-05

The World Health Organization defines health as "a state of complete physical, mental and social well-being and not merely the absence of disease or infirmity", and its constitution also asserts that health for all people is "dependent on the fullest co-operation of individuals and States". The ongoing pandemic has highlighted the power of both healthy and unhealthy information, so while healthcare and public health services have depended upon timely and accurate data and continually updated knowledge, social media has shown how unhealthy misinformation can be spread and amplified, reinforcing existing prejudices, conspiracy theories and political biases. This book presents the proceedings of MedInfo 2021, the 18th World Congress of Medical and Health Informatics, held as a virtual event from 2-4 October 2021, with pre-recorded presentations for all accepted submissions. The theme of the conference was One World, One Health - Global Partnership for Digital Innovation and submissions were requested under 5 themes: information and knowledge management; quality, safety and outcomes; health data science; human, organizational and social aspects; and global health informatics. The Programme Committee received 352 submissions from 41 countries across all IMIA regions, and 147 full papers, 60 student papers and 79 posters were accepted for presentation after review and are included in these proceedings. Providing an overview of current work in the field over a wide range of disciplines, the book will be of interest to all those whose work involves some aspect of medical or health informatics.

Cannibal Democracy - Zita Nunes 2008

Zita Nunes argues that the prevailing narratives of identity formation throughout the Americas share a dependence on metaphors of incorporation and, often, of cannibalism. From the position of the incorporating body, the construction of a national and racial identity through a process of assimilation presupposes a remainder, a residue. Nunes addresses works by writers and artists who explore what is left behind in the formation of national identities and speak to the limits of the contemporary discourse of democracy. *Cannibal Democracy* tracks its central metaphor's circulation through the work of writers such as Mrio de Andrade, W. E. B. Du Bois, and Toni Morrison and journalists of the black press, as well as work by visual artists including Magdalena Campos-Pons and Keith Piper, and reveals how exclusion—understood in terms of what is left out—can be fruitfully understood in terms of what is left over from a process of unification or incorporation. Nunes shows that while this remainder can be deferred into the future—lurking as a threat to the desired stability of the present—the residue haunts discourses of national unity, undermining the ideologies of democracy that claim to resolve issues of race. Zita Nunes is associate professor of English at the University of Maryland,

College Park.

The Symbolic Species: The Co-evolution of Language and the Brain - Terrence W. Deacon 1998-04-17

"A work of enormous breadth, likely to pleasantly surprise both general readers and experts."—New York Times Book Review This revolutionary book provides fresh answers to long-standing questions of human origins and consciousness. Drawing on his breakthrough research in comparative neuroscience, Terrence Deacon offers a wealth of insights into the significance of symbolic thinking: from the co-evolutionary exchange between language and brains over two million years of hominid evolution to the ethical repercussions that followed man's newfound access to other people's thoughts and emotions. Informing these insights is a new understanding of how Darwinian processes underlie the brain's development and function as well as its evolution. In contrast to much contemporary neuroscience that treats the brain as no more or less than a computer, Deacon provides a new clarity of vision into the mechanism of mind. It injects a renewed sense of adventure into the experience of being human.

Tener + Past Participle - Catherine E. Harre 1991
The so-called periphrastic constructions found in Spanish, and the problems which they pose for linguistic description and classification, provide a useful vehicle for exploring the possibilities for combining synchrony and diachrony. This book centres on an examination of one such construction: *tener + past participle*. A detailed study of this often neglected construction is justified in its own right, but in addition, because it is of uncertain grammatical status, it encapsulates many of the problems encountered by the synchronic linguist. The work focuses on a study of *tener + past participle* as used in the modern language, and a historical survey of its evolution. The interplay between the two is set against the background of various existing theories concerning auxiliary and periphrastic verbs, providing detailed data against which such theories can be tested. It also places the development of *tener + past participle* within the wider context of similar developments in other Romance languages.

The Cambridge History of Communism - Norman Naimark
2017-09-21

The second volume of *The Cambridge History of Communism* explores the rise of Communist states and movements after World War II. Leading experts analyze archival sources from formerly Communist states to re-examine the limits to Moscow's control of its satellites; the de-Stalinization of 1956; Communist reform movements; the rise and fall of the Sino-Soviet alliance; the growth of Communism in Asia, Africa and Latin America; and the effects of the Sino-Soviet split on world Communism. Chapters explore the cultures of Communism in the United States, Western Europe and China, and the conflicts engendered by nationalism and the continued need for support from Moscow. With the danger of a new Cold War developing between former and current Communist states and the West, this account of the roots, development and dissolution of the socialist bloc is essential reading.
