Irrigation Management in Pakistan -

Military Inc - Ayesha Siddiq-Agha 2017

Pakistan is a strategic ally of the US in the 'war on terror'. It is the

third largest recipient of US aid in the world. Yet Pakistan is a state run by its army and intelligence service. Operating in the shadows, Pakistan's military industrial complex owns and controls swathes of the economic and political landscape of the country. Military Inc. dares to illuminate the military as an oppressive holding company possessing not just security-related businesses, but also hotels, shopping malls, insurance companies, banks, farms and even an airline. The result is a deeply undemocratic society, where money is funnelled towards the military's economic enterprises, leaving those in need of it impoverished and effectively disenfranchised. With an empirical richness, and a view to Pakistan's recent history, Ayesha Siddiq offers a detailed and powerful case study of a global phenomenon: corruption, hollow economic growth and elitism. This new edition includes a chapter on the recent developments of the military's foray into the media, and a new preface.

Electrical Power Systems, 5e (PB) - Ashfaq Husain 2009-02-01

FATA--a Most Dangerous Place - Shuja Nawaz 2009

Electrical Power System Essentials - Pieter Schavemaker 2017-08-07

The electrical power supply is about to change; future generation will increasingly take place in and near local neighborhoods with diminishing reliance on distant power plants. The existing grid is not adapted for this purpose as it is largely a remnant from the 20th century. Can the grid be transformed into an intelligent and flexible grid that is future proof? This revised edition of *Electrical Power System Essentials* contains not only an accessible, broad and up-to-date overview of

alternating current (AC) power systems, but also end-of-chapter exercises in every chapter, aiding readers in their understanding of the material introduced. With an original approach the book covers the generation of electric energy from thermal power plants as from renewable energy sources and treats the incorporation of power electronic devices and FACTS. Throughout there are examples and case studies that back up the theory or techniques presented. The authors set out information on mathematical modelling and equations in appendices rather than integrated in the main text. This unique approach distinguishes it from other text books on Electrical Power Systems and makes the resource highly accessible for undergraduate students and readers without a technical background directly related to power engineering. After laying out the basics for a steady-state analysis of the three-phase power system, the book examines: generation, transmission, distribution, and utilization of electric energy wind energy, solar energy and hydro power power system protection and circuit breakers power system control and operation the organization of electricity markets and the changes currently taking place system blackouts future developments in power systems, HVDC connections and smart grids The book is supplemented by a companion website from which teaching materials can be downloaded.

The Shadow Commander - Arash Azizi 2020-11-10

When the US assassinated Qassem Soleimani in January 2020, he was one of the most powerful men in Iran. The military spearhead for Iranian foreign policy, he enacted the wishes of the country's Supreme Leader, establishing the Islamic Republic as a major force in the Middle East. He masterminded interventions in Afghanistan, Iraq, Lebanon, Syria and Yemen, supporting Iran's allies and campaigning against the Taliban, US forces, Israel and ISIS. But all this was a long way from where he began – on the margins of a country whose ruler was regarded as a friend of the West. In this gripping account, Arash Azizi examines Soleimani's life, regional influence and future ambitions. He breaks new ground through interviews with Iranians, Afghans, Iraqis and Syrians who knew Soleimani for years, including his personal driver, the aides who accompanied him to his Moscow meeting with Vladimir Putin, and his brother. Through Soleimani, Azizi reveals the true nature of Iran's global ambitions, providing a rare insight into a country whose actions are much talked about but seldom understood.

Classical and Quantum Dynamics in Condensed Phase Simulations - Bruce J Berne 1998-06-17

The school held at Villa Marigola, Lerici, Italy, in July 1997 was very much an educational experiment aimed not just at teaching a new generation of students the latest developments in computer simulation methods and theory, but also at bringing together researchers from the condensed matter computer simulation community, the biophysical chemistry community and the quantum dynamics community to confront the shared problem: the development of methods to treat the dynamics of quantum condensed phase systems. This volume collects the lectures delivered there. Due to the focus of the school, the contributions divide along natural lines into two broad groups: (1) the most sophisticated forms of the art of computer simulation, including biased phase space sampling schemes, methods which address the multiplicity of time scales in condensed phase problems, and static equilibrium methods for treating quantum systems; (2) the contributions on quantum dynamics, including methods for mixing quantum and classical dynamics in condensed phase simulations and methods capable of treating all degrees of freedom quantum-mechanically.

Pakistan at the Crossroads -

Christophe Jaffrelot 2016-04-12

In Pakistan at the Crossroads, top international scholars assess Pakistan's politics and economics and the challenges faced by its civil and military leaders domestically and diplomatically. Contributors examine the state's handling of internal threats, tensions between civilians and the military, strategies of political parties, police and law enforcement reform, trends in judicial activism, the rise of border conflicts, economic challenges, financial entanglements with foreign powers, and diplomatic relations with India, China, Iran, Saudi Arabia, Afghanistan, and the United States. In addition to ethnic strife in Baluchistan and Karachi, terrorist violence in Pakistan in response to the American-led military intervention in Afghanistan and in the Federally Administered Tribal Areas by means of drones, as well as to Pakistani army operations in the Pashtun area, has reached an unprecedented level. There is a growing consensus among state leaders that the nation's main security threats may come not from India but from its spiraling internal conflicts, though this realization may not sufficiently dissuade the Pakistani army from targeting the country's largest neighbor. This volume is therefore critical to grasping the sophisticated interplay of internal and external forces complicating the country's recent trajectory.

This report considers the biological and behavioral mechanisms that may underlie the pathogenicity of tobacco smoke. Many Surgeon General's reports have considered research findings on mechanisms in assessing the biological plausibility of associations observed in epidemiologic studies. Mechanisms of disease are important because they may provide plausibility, which is one of the guideline criteria for assessing evidence on causation. This report specifically reviews the evidence on the potential mechanisms by which smoking causes diseases and considers whether a mechanism is likely to be operative in the production of human disease by tobacco smoke. This evidence is relevant to understanding how smoking causes disease, to identifying those who may be particularly susceptible, and to assessing the potential risks of tobacco products.

Indian Books in Print - 2003

Advanced Engineering Mathematics with MATLAB - Dean G. Duffy 2022-01-03

In the four previous editions the author presented a text firmly grounded in the mathematics that engineers and scientists must understand and know how to use. Tapping into decades of teaching at the US Navy Academy and the US Military Academy and serving for

twenty-five years at (NASA) Goddard Space Flight, he combines a teaching and practical experience that is rare among authors of advanced engineering mathematics books. This edition offers a smaller, easier to read, and useful version of this classic textbook. While competing textbooks continue to grow, the book presents a slimmer, more concise option.

Instructors and students alike are rejecting the encyclopedic tome with its higher and higher price aimed at undergraduates. To assist in the choice of topics included in this new edition, the author reviewed the syllabi of various engineering mathematics courses that are taught at a wide variety of schools. Due to time constraints an instructor can select perhaps three to four topics from the book, the most likely being ordinary differential equations, Laplace transforms, Fourier series and separation of variables to solve the wave, heat, or Laplace's equation. Laplace transforms are occasionally replaced by linear algebra or vector calculus. Sturm-Liouville problem and special functions (Legendre and Bessel functions) are included for completeness. Topics such as z-transforms and complex variables are now offered in a companion book, *Advanced Engineering Mathematics: A Second Course* by the same author. MATLAB is still employed to reinforce the concepts that are taught. Of course, this Edition continues to offer a wealth of examples and applications from the scientific and engineering literature, a highlight of previous editions. Worked solutions are given in the back of the book.

Electric Power Engineering - Olle Elgerd 2012-12-06

This book is about electric energy: its generation, its transmission from the point of generation to where it

is required, and its transformation into required forms. To achieve this end, a number of devices are essential—such as generators, transmission lines, transformers, and electric motors. We discuss the design, construction, and operating characteristics of the electric devices used in the transformation to and from electric energy. This text is designed to be used in a one-semester course in electric energy conversion at the second-year level of the Bachelor of Engineering course. It is assumed that the student is familiar with the laws of thermodynamics and has taken a course in basic circuit analysis, including the application of phasors. We begin with a discussion of how humankind has successfully harnessed the energy of wind, water, the sun, biomass, animals, geothermal sources, fossils, and nuclear fission to make its life comfortable. Some of the consequences of this activity on the environment are examined. In Chapter 2, we review the basic physics of energy and its conversion. This may be, to some extent, a repetition of knowledge gained in high-school and first year university courses. However, we believe that such review is necessary to establish a suitable base from which to launch the subject of

electric energy conversion.

Digital Signal Processing - Sanjit Kumar Mitra 2006-01

Digital Signal Processing: A Computer-Based Approach is intended for a two-semester course on digital signal processing for seniors or first-year graduate students. Based on user feedback, a number of new topics have been added to the third edition, while some excess topics from the second edition have been removed. The author has taken great care to organize the chapters more logically by reordering the sections within chapters. More worked-out examples have also been included. The book contains more than 500 problems and 150 MATLAB exercises. New topics in the third edition include: short-time characterization of discrete-time signals, expanded coverage of discrete-time Fourier transform and discrete Fourier transform, prime factor algorithm for DFT computation, sliding DFT, zoom FFT, chirp Fourier transform, expanded coverage of z-transform, group delay equalization of IIR digital filters, design of computationally efficient FIR digital filters, semi-symbolic analysis of digital filter structures, spline interpolation, spectral factorization, discrete wavelet transform.
