## **Particle Image Velocimetry** - Ronald J. Adrian 2011

Particle image velocimetry, or PIV, refers to a class of methods used in experimental fluid mechanics to determine instantaneous fields of the vector velocity by measuring the displacements of numerous fine particles that accurately follow the motion of the fluid. Although the concept of measuring particle displacements is simple in essence, the factors that need to be addressed to design and implement PIV systems that achieve reliable, accurate, and fast measurements and to interpret the results are surprisingly numerous. The aim of this book is to analyze and explain them comprehensively.

## Aircraft Design - Ajoy Kumar Kundu 2010-04-12

Aircraft Design explores fixed winged aircraft design at the conceptual phase of a project. Designing an aircraft is a complex multifaceted process embracing many technical challenges in a multidisciplinary environment. The methodology shown here includes formal sizing of the aircraft, engine matching, and substantiating performance to comply with the customer's demands and government regulatory standards. Associated topics include safety issues, environmental issues, material choice, structural layout, understanding flight deck, avionics, and systems (for both civilian and military aircraft). Cost estimation and manufacturing considerations are also discussed. The chapters are arranged to optimize understanding of industrial approaches to aircraft design methodology. Example exercises from the author's industrial experience dealing with a typical aircraft design are included.

Nonequilibrium Gas Dynamics and Molecular Simulation - Iain D. Boyd 2017-03-23

This current and comprehensive book provides an updated treatment of molecular gas dynamics topics for aerospace engineers, or anyone researching high-temperature gas flows for hypersonic vehicles and propulsion systems. It demonstrates how the areas of quantum mechanics, kinetic theory, and statistical mechanics can combine in order to facilitate the study of nonequilibrium processes of internal energy relaxation and chemistry. All of these theoretical ideas are used to explain the direct simulation Monte Carlo (DSMC) method, a numerical technique based on molecular simulation. Because this text provides comprehensive coverage of the physical models available for use in the DSMC method, in addition to the equations and algorithms required to implement the DSMC numerical method, readers will learn to solve nonequilibrium flow problems and perform computer simulations, and obtain a more complete understanding of various physical modeling options for DSMC than is available in other texts.

Shock Wave-Boundary-Layer Interactions - Holger Babinsky 2011-09-12

Shock wave-boundary-layer interaction (SBLI) is a fundamental phenomenon in gas dynamics that is observed in many practical situations, ranging from transonic aircraft wings to hypersonic vehicles and engines. SBLIs have the potential to pose serious problems in a flowfield; hence they often prove to be a critical - or even design limiting - issue for many aerospace applications. This is the first book devoted solely to a comprehensive, state-of-the-art explanation of this phenomenon. It includes a description of the basic fluid mechanics of SBLIs plus contributions from leading international experts who share their insight into their physics and the impact they have in practical flow situations. This book is for practitioners and graduate students in aerodynamics who wish to familiarize themselves with all aspects of SBLI flows. It is a valuable resource for specialists because it compiles experimental, computational and theoretical knowledge in one place.

Computational Aeroacoustics - Christopher K. W. Tam 2012-09-28

Computational aeroacoustics (CAA) is a relatively new research area. CAA algorithms have developed rapidly and the methods have been applied in many areas of aeroacoustics. The objective of CAA is not simply to develop computational methods but also to use these methods to solve practical aeroacoustics problems and to perform numerical simulation of aeroacoustic phenomena. By analysing the simulation data, an investigator can determine noise generation mechanisms and sound propagation processes. This is both a textbook for graduate students and a reference for researchers in CAA and as such is self-contained. No prior knowledge of numerical methods for solving partial differential equations (PDEs) is needed, however, a general understanding of partial differential equations and basic numerical analysis is assumed. Exercises are included and are designed to be an integral part of the chapter content. In addition, sample computer programs are included to illustrate the implementation of the numerical algorithms.

*Newspaper Shreds*

- Erian A. Baskharone, Ph.D., P.E. 2009-07-15

Seven thousand miles is the distance between Cairo, Egypt and the U.S. east coast, and I have been exposed to the worst kind of abuse on both sides of the Atlantic Ocean. "Newspaper Shreds," spread on my late mother's bed, on her "honeymoon" signaled to my late father that my mother's pregnancy with me was a result of adultery. Being convinced of a child's illegitimacy by a non-Arab husband wouldn't be such a "great deal," but to an Egyptian (particularly Christian) husband, the consequences are no less than a disaster, a lifetime disaster to both the wife and the child. On the late morning of August 17, 2008, I determined for myself that I have always been my father's legitimate son. My story may be an indictment of the culture in which I was born and raised, and of my own father's treatment of my mother and myself. However, it is important to me, just like anything in my life, that I tell the Truth: "I have loved my father a whole lot more than I cared for life itself. My story spans more than six decades of witnessing the terrible treatment of women both in Egypt as well as the United States. The novel also displays the disastrous effects that those attitudes and that treatment have wrought on the children born to those societies. This is not a social commentary, but a personal story that really impacted me and "almost" my beliefs. It has black-colored the way I see the world. At one point in my life, due to a serious illness, I wrongly thought that I would never be able to father children. The night I thought that there was "no hope," I was sitting with an elderly lady, that same night, who lived next door to me in Cincinnati. As the lady realized that she had no more phrases to comfort me, she left me with one sentence. "So what, rats multiply too, but they live and die as rats," she said.

Cost data is considerably updated, many new images have been added and new sections are included on the emerging fields of Uninhabited Aerial Vehicles and environmentally-friendly airlines. Examples from real aircraft projects are presented throughout, demonstrating to students the applications of the theory. Three appendices and a bibliography provide a wealth of information, much not published elsewhere, including simple aerodynamic formulae, an introduction to airworthiness and environmental requirements, aircraft, engine and equipment data, and a case study of the conceptual design of a large airliner.
