Understanding Inconsistent Science - Peter Vickers 2013-08-22

Peter Vickers examines 'inconsistent theories' in the history of science—theories which, though contradictory, are held to be extremely useful. He argues that these 'theories' are actually significantly different entities, and warns that the traditional goal of philosophy to make substantial, general claims about how science works is misguided.

A Calculus of Color - Robert Kuhn McGregor 2015-03-31

In 1947, as the integration of Major League Baseball began, the once-daring American League had grown reactionary, unwilling to confront postwar challenges--population shifts, labor issues and, above all, racial integration. The league had matured in the Jim Crow era, when northern cities responded to the Great Migration by restricting black access to housing, transportation, accommodations and entertainment, while blacks created their own institutions, including baseball's Negro Leagues. As the political climate changed and some major league teams realized the necessity of integration, the American League proved painfully reluctant. With the exception of the Cleveland Indians, integration was slow and often ineffective. This book examines the integration of baseball--widely viewed as a triumph--through the experiences of the American League and finds only a limited shift in racial values. The teams accepted few black players and made no effort to alter management structures, and organized baseball remained an institution governed by tradition-bound owners.

Quadratic Form Theory and Differential Equations - 1981-03-10

In this book, we study theoretical and practical aspects of computing methods for mathematical modelling of nonlinear systems. A number of computing techniques are considered, such as methods of operator approximation with any given accuracy; operator interpolation techniques including a non-Lagrange interpolation; methods of system representation subject to constraints associated with concepts of causality, memory and stationarity; methods of system representation with an accuracy that is the best within a given class of models; methods of covariance matrix estimation; methods for low-rank matrix approximations; hybrid methods based on a combination of iterative procedures and best operator approximation; and methods for information compression and filtering under condition that a filter model should satisfy restrictions associated with causality and different types of memory. As a result, the book represents a blend of new methods in general computational analysis, and specific, but also generic, techniques for study of systems theory and its particular branches, such as optimal filtering and information compression. - Best operator approximation, - Non-Lagrange interpolation, - Generic Karhunen-Loeve transform - Generalised low-rank matrix approximation - Optimal data compression - Optimal nonlinear filtering

Between Rationalism and Empiricism - Erhard Scheibe 2002-12-06

Scheibe is one of the most important philosophers of science in Germany. He has written extensively on all the problems that confront the philosophy of physics: rationalism vs. empiricism; reductionism; the foundations of quantum mechanics; space-time, and much more. Since little of his work has been translated into English, he is not yet well known internationally. However, this collection of some 40 of his papers will remedy this unfortunate situation.

This volume contains thoroughly refereed and revised full papers selected from the presentations at the first workshop held under the auspices of the ESPRIT Basic Research Action 6453 *Types for Proofs and Programs* in Nijmegen, The Netherlands, in May 1993. As the whole ESPRIT BRA 6453, this volume is devoted to the theoretical foundations, design and applications of systems for theory development. Such systems help in designing mathematical axiomatisation, performing computer-aided logical reasoning, and managing databases of mathematical facts; they are also known as proof assistants or proof checkers.

Wittgenstein: Understanding and Meaning - Gordon P. Baker 2008-04-15

This is a new edition of the first volume of G.P. Baker and P.M.S. Hacker's definitive reference work on Wittgenstein's *Philosophical Investigations*. New edition of the first volume of the monumental four-volume *Analytical Commentary on the Philosophical Investigations*. Takes into account much material that was unavailable when the first edition was written. Following Baker's death in 2002, P.M.S. Hacker has thoroughly revised the first volume, rewriting many essays and sections of exegesis completely. Part One - the Essays - now includes two completely new essays: 'Meaning and Use' and 'The Recantation of a Metaphysician'. Part Two - Exegesis §§1-184 - has been thoroughly revised in the light of the electronic publication of Wittgenstein's *Nachlass*, and includes many new interpretations of the remarks, a history of the composition of the book, and an overview of its structure. The revisions will ensure that this remains the definitive reference work on Wittgenstein's masterpiece for the foreseeable future.

Cosmic Purpose - Toyohiko Kagawa 2014-03-04

On Christmas Eve in 1909, twenty-one-year-old Kagawa Toyohiko (1888-1960) rented a room in Kobe's worst slum where, apart from two years of study in the United States, he remained with his wife and co-worker Haru for more than ten years. They engaged in pastoral work, evangelism, social reform movements, and literary

activities, founding numerous institutions that are still in operation today. After publishing a best-selling novel in 1920, Kagawa began to draw the attention of people from around Japan and the world. His literary output was prodigious, amounting to more than 300 books. Often compared with his contemporaries Mahatma Gandhi and Albert Schweitzer, Kagawa was nominated twice for the Nobel Prize in Literature (1947, 1948) and three times for the Nobel Peace Prize (1954, 1955, 1956). Challenging the materialism of Charles Darwin and the claim of H. G. Wells that "we must give up any idea that evolution is purposeful," Cosmic Purpose draws on research in physics, chemistry, astrophysics, mineralogy, genetics, and biology

to offer evidence of purpose in the vast span of evolutionary history from the atom to human consciousness. In his attempt to renew our sense of wonder at this process, Kagawa proposes a "logic of finality" that links life to purpose. Partial Differential Equations and Calculus of Variations - Stefan Hildebrandt 2006-11-14
This volume contains 18 invited papers by members and guests of the former Sonderforschungsbereich in Bonn (SFB 72) who, over the years, collaborated on the research group "Solution of PDE's and Calculus of Variations". The emphasis is on existence and regularity results, on special equations of mathematical physics and on scattering theory.
