Handbook on Sustainable Investments: Background Information and Practical Examples for Institutional Asset Owners - Swiss Sustainable Finance 2017-12-27 A fast growing share of investors have recently widened their scope of analysis to criteria regarded as extra-financial. They are driven by different motivations. Adoption of sustainable investment strategies can be driven, on the one hand by the sole motivation to hedge portfolios against knowable risks by expanding the conceptual framework to incorporate the latest best practice in risk management. Other investors focus rather on a long-term view and make an active bet on societal change. Recent empirical research has shown that considering sustainability factors within investment practices does not come at a cost (i.e. through a reduced opportunity set) but allows for competitive returns. Furthermore, the growing market and resulting competition in the wake of sustainable investing going mainstream has the welcome effect to compress fees for such products. Hence, staying informed about recent trends in sustainable investing is imperative no matter what the main motivation is.

#### *ASSET MANAGEMENT HANDBOOK FOR REAL ESTATE PORTFOLIOS*

- R. M. Santucci 2013-10

The Asset Management Handbook is divided into three phases. Chapters 1 through 3 are conceptual introductions. Chapters 4, 5, 6 and 7 get into the "meat" of the policies and techniques of evaluating the capital needs of your property over the next 40 years. Chapters 8 and 9 help you identify which properties are doing well and which are the most threatened. What action should you take? What are the standard preservation and rejuvenation options available to a real estate portfolio manager? What is Asset Management? People are more accustomed to thinking about asset management of money or stocks or a package of annuity and savings accounts. Real estate asset management is a slower, longer term process. The properties in your portfolio, especially in affordable housing, have life cycles of 30, 40 or infinite time periods. Most nonprofit owners are not interested in selling to capture any appreciation on their properties. Their goal is to provide housing for the foreseeable future as long as the asset can perform. Many nonprofits and mid size property owners do not have a dedicated asset manager. It is extraordinarily important that someone take on that long-term analysis, be it for 10%, 25% or 50% of a full time employee. The next step is to benchmark your properties. How are you doing compared to the world? Not just on straight bottom line consideration, but how about in human services? Have you saved sufficient money to replace the roof or add the sprinklers that will be required at the next renovation? The Asset Management Handbook provides well-established objective criteria for 25 different variables. We've seen participants in the asset management practicum expand that up to 40

variables to analyze on an annual basis. We'll see how benchmarking and risk ranking of your portfolio are essential first steps in establishing its viability and needs. Capital Needs and Their Funds. In this "meat" of the manual, we walk you through essential policies that define how your properties will operate over the long term. We show how policies made by lenders, bankers and other short term partners can be self destructive and damaging to property owners holding for the long term. First example of the dichotomy, the lender is suggesting the reserve is sufficient when two years after their loan matures, the property will require \$4 million of replacement expenditures. This is fine for investment property held for resale. You just flip it and get down the road. Most affordable housing owners do not consider selling the property as a positive outcome. Even if you've never performed a property inspection before, the Handbook offers you easy methods of counting and sorting components into well established remaining economic lives Then it is on to the massive spreadsheet that calculates the future need and the various waves in which it will appear. Exterior paint first, then roofs, windows and doors, and kitchens and baths follow and then it starts all over again. Most capital needs assessments performed by third parties make financial assumptions that are untenable. Their interest rates on earnings are overstated and their inflation rate on the components are generally understated leaving you with significant shortfalls, even if you have escrowed according to directions. We will keep you out of that trap, showing you the realistic funds that are required and the time periods when the inevitable refinancing windows will occur. Risk and Solutions. In the final section, we evaluate your primary risks. Which properties should you address first? Which properties have the strength and energy to function on their own? Then what should you do about it? Refinance? Renegotiate? Value engineer? Raise rents? In the foot race, the runner is always caught by the tsunami of required replacements. It is just a fact of the business that every 20 to 30 years you've got to re-invest a significant amount of money

The Markowitz framework continues to be used as a basis for both practical portfolio construction and emerging research in financial economics. Such concepts as the Capital Asset Pricing Model (CAPM) and the Arbitrage Pricing Theory (APT), for example, provide the foundation for setting benchmarks, for predicting returns and risk, and for performance measurement. This volume showcases original essays by some of today's most prominent academics and practitioners in the field on the contemporary application of Markowitz techniques. Covering a wide spectrum of topics, including portfolio selection, data mining tests, and multi-factor risk models, the book presents a comprehensive approach to portfolio construction tools, models, frameworks, and analyses, with both practical and theoretical implications.
