Benchmarking in Construction - Steven McCabe
2008-04-30

This is the first post-Egan book to look at benchmarking and KPIs (key performance indicators) in the construction industry. Benchmarking is one of the key management techniques the construction industry now needs to adopt if it is to meet challenging new efficiency and productivity targets as well as clients' demands for best value. Contracts are increasingly being awarded only to contractors who can demonstrate the lean construction practices that come with benchmarking. This authoritative and accessible book: * clarifies the thinking behind benchmarking and why firms must now adopt it *shows how to set up effective benchmarking *explains the theoretical background and offers clear, practical guidance *demonstrates best practice through reference to case studies. There are nine case studies describing the use of KPIs and the application of the EFQM excellence model - including

contributions from Morrison and John Mowlem. The author Steve McCabe is senior lecturer in the School of Property and Construction at the University of Central England in Birmingham. He has conducted extensive research in quality improvement techniques and benchmarking and has wide experience in industry with a number of contractors and within the local authority sector.

Total Innovation Management - Qingrui Xu
2023-03-28

This book is the research report of the 'Construction of Theory and Formation Mechanism of Total Innovation Management (TIM)' (Program No. 70372018), a program funded by the National Natural Science Foundation of China. This program aims to discuss and analyze, under the general trend of indigenous innovation, how enterprises

construct indigenous innovation capability through total innovation management and to offer enterprises theoretical foundations and practical guidance to develop themselves towards indigenous innovation. The research results are not only the results of a three-year long research but also the reflection of the accumulated experiences of our research center in the field of technology innovation for nearly 40 years. In the field of technology innovation, we have experienced three distinct phases, namely: secondary innovation, portfolio innovation and total innovation. Total innovation is the main characteristic of an innovation-based enterprise. Creating an innovation-oriented enterprise by constructing a total innovation system is the approach that successful foreign enterprises use to move towards excellence and also the only way that Chinese enterprises have to take to become innovation-oriented enterprises that leapfrog in development.

Leverage Innovation Capability: Application Of Total Innovation Management In China's Smes' Study - Qingrui Xu 2012-06-26

Innovation is widely recognized as a major source of modern productivity growth. Indeed, it is seen as constituting a central process of economic advancement in industrialized countries. Despite this, a considerable gap still

exists in knowledge and technological capability between industrialized countries and the more dynamic developing countries such as China. Small and medium sized enterprises (SMEs) are a major contributor to China's economy and SME's contribution to China's GDP is close to 60%. This book studies the strategy and mechanism of leveraging innovation capability in China's SMEs by applying the theory of Total Innovation Management (TIM), which is the new paradigm of managing innovation in enterprises developed by the Research Center for "Innovation and Development" (shortly RCID) of Zhejiang University, China. According to Eric von Hippel, MIT, RCID is the Top 10 Innovation Management research institutes in the world. Leverage Innovation Capability probes the strategy and mechanism of leverage the innovation capability in the firm, especially in China's SMEs. It analyzes how the SMEs utilize all the innovation elements in the firm, including Strategy innovation, Tech innovation, marketing

innovation, organization innovation, culture innovation, innovation networking, learning and knowledge management, high involvement innovation, cooperation innovation, etc. to leverage innovation capability.

Organization Development in the Largest Global Organization - Robert L. Reinhard
2022-01-01

The U.S. military, as the core constituent of the Department of Defense, collectively represents the largest and most complex organization on earth. As such, the U.S. military implemented the largest formal OD programs in the world. These programs, from inception to present day, utilized diverse and evolving OD intervention typologies to garner congruence with the environment. The research for this book, accomplished using an inductive, grounded theory approach, examined the initiatives that fostered the use of OD intervention typologies. The findings revealed three major epochs of OD interventions that span a 50-year timeline. The epochs include: (1) Traditional OD; (2) Total Quality Management (TQM); and (3) Continuous

Process Improvement (CPI). The epoch of Traditional OD represents the use of human process interventions while TQM and CPI represent the use of technostructural interventions. In the end, the relationship between organization design and culture, and the selection of OD intervention typologies, were best explained using variables that explicate diverse environmental occurrences that influenced senior military leaders' perceived need for specific OD interventions. These perceived needs were predicated on the requirement to exploit vital resources in an effort to bolster warfighting operational readiness in support of the American citizenry.

Paradigm Shift in Technologies and Innovation Systems - John Cantwell

2019-11-02

This book provides some new ideas on the conceptualization of a shift in technological paradigm, and it explores in depth the relevance of this concept for research on innovation

systems. It examines text-mining software and analyzes patent data as well as academic and business journals to illustrate the paradigm shift of newly emerging technologies, such as the all-solid-state battery and automatic driving for electric vehicles, and surgical robots. It also explores the critical role of emerging software technologies by examining US, EU, and Japanese patent statistics. Highlighting the paradigm shift of technologies since the 1990s and the geographical dispersion of innovative capabilities, it identifies essential trends toward new innovation systems as well as the concentration and dispersion of national and corporate R&D capabilities that have taken place as a result. In this new paradigm, the competitiveness of a company is decisively determined by other innovations in systems and management. Since the 1990s, when a network economy began to be established and technological know-how came to be easily transferred across borders, the changing

structure of technological activities has required organizations with traditional integral and closed architecture models to move toward open innovation or modular architectures. These changes involve wider technological areas and cognitive diversity among international inter-firm and intra-firm R&D networks. This book is highly recommended not only to academicians but also to business people seeking an in-depth and up-to-date overview of the paradigm shift of technologies and new innovation systems.
