From Cherkassy to the Pacific Ocean - Igor Nebolsin
2018-08-19

The new study of Igor Nebolsin provides end to end combat history of the Soviet 6th Guards Tank Army from its formation in January 1944 till the defeat of Nazi Germany in May 1945 and capitulation of Japan in September 1945. The 6th TA had its combat baptism at Cherkassy (Korsun) in January-February 1944 where it first played an important role in encircling units of German XI and XLII Army Corps'. Then army was on the path of the German III. Panzer Corps relief attacks of Cherkassy Pocket. In March 1944 in adverse weather conditions (rasputitsa) Army crossed South Bug, Dnestr

and Prut rivers and in April 1944 was one of the first Soviet units entered Bessarabia (Romania). During April - June 1944 6th Tank Army conducted heavy offensive and defensive battles in the area of Jassy in Northern Romania against armor units of Group Army South Ukraine which included 23. Panzer Division, 24. Panzer Division, 14. Panzer Division, Gross Deutschland Division. Although Army failed to capture Jassy and penetrate Romania it managed to withstand German attempt to destroy it in a strong counteroffensive. In August 1944 6th TA played a decisive role in the Jassy - Kishinev operation which resulted in the destruction of the 6th German Army, knocking out Romania from the WW2 as an ally of Nazi Germany, capturing Ploesti oil fields, and Bucharest. In September-October 1944 6th Tank Army was engaged in the heavy combats in Transylvania and Hungary including tank battle at Debrecen. The day by day coverage of events, honest views of the Soviet & German commanders, statistical data from both Russian and German viewpoints, and the 'human element' based on the exciting firsthand recollections of Soviet tank officers all make this study an incredibly valuable source of information. The text is fully supported by specially-commissioned color maps and an extensive selection of photographs, many from private collections.

Making Sense of Data II - Glenn J. Myatt 2009-02-03

A hands-on guide to making valuable decisions from data using advanced data mining methods and techniques This second installment in the Making Sense of Data series continues to explore a diverse range of commonly used approaches to making and communicating decisions from data. Delving into more technical topics, this book equips readers with advanced data mining methods that are needed to successfully translate raw data into smart decisions across various fields of research including business, engineering, finance, and the social sciences. Following a comprehensive introduction that details how to define a problem, perform an analysis, and deploy the results, Making Sense of Data II addresses the following key techniques for advanced data analysis: Data Visualization reviews principles and methods for understanding and communicating data through the use of visualization including single variables, the relationship between two or more variables, groupings in data, and dynamic approaches to interacting with data through graphical user interfaces. Clustering outlines common approaches to clustering data sets and provides detailed explanations of methods for determining the distance between observations and procedures for clustering observations. Agglomerative hierarchical clustering, partitioned-based clustering, and fuzzy clustering are also discussed. Predictive Analytics presents a discussion on how to build and assess models, along with a series of predictive analytics that can be used in a variety of situations including principal component analysis, multiple linear regression, discriminate analysis, logistic regression, and Naïve Bayes. Applications demonstrates the current uses of data mining across a wide range of industries and features case studies that illustrate the related applications in real-world scenarios. Each method is discussed within the context of a data mining process including defining the problem and deploying the results, and readers are provided with guidance on when

and how each method should be used. The related Web site for the series (www.makingsenseofdata.com) provides a hands-on data analysis and data mining experience. Readers wishing to gain more practical experience will benefit from the tutorial section of the book in conjunction with the Traceist™ software, which is freely available online. With its comprehensive collection of advanced data mining methods coupled with tutorials for applications in a range of fields, Making Sense of Data II is an indispensable book for courses on data analysis and data mining at the upper-undergraduate and graduate levels. It also serves as a valuable reference for researchers and professionals who are interested in learning how to accomplish effective decision making from data and understanding if data analysis and data mining methods could help their organization.

MATLAB Guide to Finite Elements - Peter I. Kattan
2013-04-17

This book explores numerical implementation of Finite Element Analysis using MATLAB. Stressing interactive use of MATLAB, it provides examples and exercises from mechanical, civil and aerospace engineering as well as materials science. The text includes a short MATLAB tutorial. An extensive solutions manual offers detailed solutions to all problems in the book for classroom use. The second edition includes a new brick (solid) element with eight nodes and a one-dimensional fluid flow element. Also added is a review of applications of finite elements in fluid flow, heat transfer, structural dynamics and electro-magnetics. The accompanying CD-ROM presents more than fifty MATLAB functions.

Ask Dr. Mueller - Cookie Mueller 1997

Ask Dr. Mueller captures the glamour and grittiness of

Cookie Mueller's life and times. Here are previously unpublished stories - wacky as they are enlightening - along with favorites from *Walking Through Clear Water* in a Pool Painted Black and other publications. Also the best of Cookie's art columns from *Details* magazine, and the funniest of her advice columns from the *East Village Eye*, on everything from homeopathic medicine to how to cut your cocaine with a healthy substance. This collection is as much an autobiography as it is a map of downtown New York in the early '80s - that moment before *Bright Lights*, *Big City*, before the art world exploded, before New York changed into a yuppie metropolis, while it still had a glimmer of bohemian life.

Mordin on Time - Nick Mordin 2003-02

In *Mordin On Time*, Nick Mordin sets out his method for

answering the most fundamental question facing punters in any race, namely: which is the fastest horse? He was timing the sections of races with a stop watch, estimating wind strength and direction, adjusting for movements of running rails, using projected times and calculating average times years before the best-selling American books on speed rating were published. This new edition incorporates much new material, including standard times for all Irish racecourses (plus the major French ones). *Mordin On Time* enables the reader to construct their own speed ratings wherever they live.

Cognitive Interference Management in Heterogeneous Networks - Dania Marabissi 2015-06-24

This brief investigates the role of interference management in Heterogeneous Networks (Het Nets), focusing on cognitive approaches and the use of beamforming. Key concepts of Het Nets are introduced and different deployment strategies are examined, such as sharing the same frequency band of the macro cells or using new high frequency bands. Particular attention is devoted to co-channel deployment and to the problem of interference management, addressing various strategies that can be adopted to handle the interference between the cells. In addition, the brief explores cognitive small cells which are able to avoid or limit interference by using suitable beamforming and resource allocation schemes. The suggested solutions are supported by numerical results in terms of performance evaluations and comparisons.

Conventional history assumes that the rise of the steamship trade killed off the Indian ocean dhow trade in the twentieth century. This study argues that the dhow economy played a major role in shaping the economic and social life of colonial Zanzibar. Dhows and the regional trade they fostered allowed a class of indigenous entrepreneurs to thrive in Zanzibar. These entrepreneurs, whose economic interests stretched across continents and colonial boundaries, were able to thwart or shape many of the colonial state's pet projects. Not only did steamships fail to drive out indigenous sailing craft, but in some cases dhows were able to drive the steamer out of specific market niches. In highlighting the role of East Africa's commercial connections to the Middle East and India during the colonial period, this book makes a major contribution to African history as part of world history.

Building a Longboat - Ida Nicolaisen 1991

The craftsmanship of longboat-building is not something we can draw on today, so when the Viking Ship Museum, Roskilde wanted to look into this ancient skill, they needed to track down people who still had the tradition of boat-building in their culture. This book looks at the boat-building and culture of the Punan Bah people of Borneo and then puts the longboat in its wider cultural-historical perspective.

Mathematical Physics and Stochastic Analysis - Sergio Albeverio 2000

In October 1998 a conference was held in Lisbon to celebrate Ludwig Streit's 60th birthday. This book collects some of the papers presented at the conference as well as other essays contributed by the many friends and collaborators who wanted to honor Ludwig Streit's scientific career and personality. The contributions cover many aspects of contemporary mathematical physics. Of particular importance are new results on infinite-dimensional stochastic analysis and its applications to a wide range of physical domains. A History of Underground Comics - Mark James Estren 1993

Green Boating - Misse Wester 2009

The coastal and archipelago areas in the Baltic Sea are popular destinations for a number of tourists. An important group of tourists is boaters, who visit the coastal areas during a short summer period. Boat owners are sometimes pictured as having a great interest for the nature and a willingness to do right. Pollution from pleasure boats such as discharges of oil and fuel, antifouling paints and cleaning agents have a negative impact on the coastal environment. Environmentally sound alternatives exist to some extent, but are not very

common. Sustainable alternatives for boaters are lacking behind. One of the underlying purposes of this study was to understand how we can help boat owners change their behaviour and decrease the negative impact on the marine environment. The survey among boaters has been conducted

in Finland, Sweden and Denmark with a web based survey ordered by the Keep Sweden Tidy Foundation together with Keep the Archipelago Tidy Association in Finland and the Danish Outdoor Council. The research was performed by SIFO Research International.
